3. Read and following text then answer the questions:**(6 m/1 m each)**

What do people need to light their homes and drive cars? Energy! It gives to power many things we need and use. Most of the energy comes from coal, oil and gas. They are called fossil fuels. Those fuels come from fossils under the ground. Fossils are the remains of plants and animals that lived long ago. Burning fossils fuel pollutes the air. The air becomes dirty. That can be harmful to people, animals, and plants. Now more people are sing clean energy. The sun gives the Earth heat and light. Some homes have solar panels on the roof. The panels collect sunlight and turn it into electricity. That kind of energy lets people do many things. For example, we use electricity to light our homes and watch television. Solar power can also be used to warm up the water in our homes. People can turn wind energy into electricity. Wind turbines are machines that spin when the wind blows. They make electricity. So what can we do to prevent or reduce light pollution? In homes and work places, we should turn off lights that we do not need and make sure that our lights are only as powerful as they need to be.
