Tables

PART A—SCHOOL ENROLLMENT

ENROLLMENT LEVELS AND BACKGROUND OR FAMILY CHARACTERISTICS

- A-1.** Enrollment Status of the Population 3 Years and Over, by Age, Sex, Race, Hispanic Origin, Nativity, and Selected Educational Characteristics, October 2000
- A-2.** Single Grade of Enrollment and High School Graduation Status for the Population 3 Years and Over, by Age (Single Years for 3 to 24 Years), Sex, Race, and Hispanic Origin, October 2000
- A-3.** Preprimary School Enrollment of the Population 3 to 6 Years, by Mother's Labor Force Status and Education, Family Income, Race, and Hispanic Origin, October 2000
- A-4.** Preprimary School Enrollment of the Population 3 to 6 Years, by Control of School, Mother's Labor Force Status and Education, Family Income, Race, and Hispanic Origin, October 2000
- A-5.** Level of Enrollment Below College for Population 3 to 24 Years, by Control of School, Sex, Metropolitan Status, Race, and Hispanic Origin, October 2000
- A-6.** Enrollment Status of Primary Family Members 3 to 17 Years, by Family Income, Level of Enrollment, Control of School, Sex, Race, and Hispanic Origin, October 2000

SECONDARY AND POSTSECONDARY EDUCATION

- A-7.** Population 15 to 24 Years Enrolled in Secondary School in Previous Year by Current Enrollment Status, Age, Sex, Race, and Hispanic Origin, October 2000
- A-8.** Population 15 to 24 Years Enrolled in Secondary School in Previous Year by Current Enrollment Status, Sex, Race, Hispanic Origin, and Family Income (for Dependent Family Members), October 2000
- A-9.** School Enrollment of the Population 15 Years and Over, by Attendance Status, Type and Control of School, Age, Sex, Race, and Hispanic Origin, October 2000
- A-10.** Attendance Status of College Students 15 Years and Over, by Age, Sex, Year and Type of College, Race, and Hispanic Origin, October 2000
- A-11.** Employment Status of High School and College Students 15 Years and Over, by Level of School, Attendance Status, Age, Sex, Race, and Hispanic Origin, October 2000
- A-12.** Population 15 Years and Over, Enrolled in Vocational Courses, by Employment Status, Age, Sex, Race, and Hispanic Origin, October 2000
- A-13.** Enrollment and Employment Status of Recent High School Graduates 16 to 24 Years, by Type of School, Attainment Level for People Not Enrolled, Sex, Race, and Hispanic Origin, October 2000
- A-14.** Enrollment Status of Primary Family Members 18 to 24 Years, by Family Income, Level of Enrollment, Type of School, Attendance Status, Sex, Race, and Hispanic Origin, October 2000

FAMILIES WITH ELEMENTARY AND SECONDARY AGE CHILDREN

- A-15.** Families with Children 5 to 24 Years by Enrollment Status in Kindergarten to College, by Control of School, Family Income, Type of Family, Race, and Hispanic Origin, October 2000

HISTORICAL ENROLLMENT CHARACTERISTICS

- A-16.** School Enrollment of the Population 3 to 34 Years, by Level and Control of School, Race and Hispanic Origin, October 1955 to 2000
- A-17.** Percentage of Population 3 to 34 Years Enrolled in School, by Age, Sex, Race, and Hispanic Origin, October 1947 to 2000
- A-18.** Population 6 to 17 Years Enrolled Below Modal Grade, 1971 to 2000
- A-19.** High School Dropout Rates by Sex, Grade, Race and Hispanic Origin, October 1967 to 2000
- A-20.** Population 14 to 24 Years by High School Graduate Status, College Enrollment, Attainment, Sex, Race and Hispanic Origin, October 1967 to 2000
- A-21.** Age Distribution of College Students 14 Years and Over, by Sex, October 1947 to 2000
- A-22.** College Enrollment of Students 14 to 34 Years, by Type of College, Attendance Status, Age and Sex, October 1970 to 2000

PART B—EDUCATIONAL ATTAINMENT

EDUCATIONAL ATTAINMENT AND BACKGROUND OR FAMILY CHARACTERISTICS

- B-1.** Educational Attainment of the Population 15 Years and Over, by Age, Sex, Race, and Hispanic Origin, March 2002
- B-2.** Percent of High School and College Graduates of the Population 15 Years and Over, by Age, Sex, Race, and Hispanic Origin, March 2002
- B-3.** Educational Attainment of Population 15 Years and Over, by Single Years of Age, Sex, Race, and Hispanic Origin, March 2002
- B-4.** Educational Attainment of Population 15 Years and Over, by Marital Status, Age, Sex, Race, and Hispanic Origin, March 2002
- B-5.** Educational Attainment of Population 15 Years and Over, by Household Relationship, Age, Sex, Race, and Hispanic Origin, March 2002

EDUCATIONAL ATTAINMENT, EMPLOYMENT, AND INCOME

- B-6.** Educational Attainment of Civilians 16 Years and Over in Labor Force, by Age, Sex, Race, and Hispanic Origin, March 2002
- B-7.** Educational Attainment of Population 16 Years and Over, by Labor Force Status, Age, Sex, Race, and Hispanic Origin, March 2002
- B-8.** Educational Attainment of Employed Civilians 18 to 64 Years, by Occupation, Age, Sex, Race, and Hispanic Origin, March 2002
- B-9.** Educational Attainment of Employed Civilians 18 to 64 Years, by Industry, Age, Sex, Race, and Hispanic Origin, March 2002
- B-10.** Income in 2001 by Educational Attainment for Population 18 Years and Over, by Age, Sex, Race, and Hispanic Origin, March 2002

B-11. Earnings in 2001 by Educational Attainment for Population 18 Years and Over, by Age, Sex, Race, and Hispanic Origin, March 2002

B-12. Educational Attainment for Population 25 Years and Over, by Nativity and Period of Entry, Age, Sex, Race, and Hispanic Origin, March 2002

EDUCATIONAL ATTAINMENT BY GEOGRAPHIC LOCATION

B-13. Educational Attainment of Population 18 Years and Over, by Metropolitan and Nonmetropolitan Residence, Age, Sex, Race, and Hispanic Origin, March 2002

B-14. Regional Educational Attainment of Population 18 Years and Over, by Age, Sex, Race, and Hispanic Origin, March 2002

B-15. Educational Attainment of Population 25 Years and Over, by State, March 2002

B-16. Educational Attainment of Population 18 Years and Over, by Age, Sex, Race, and Hispanic Origin, for the 25 Largest States, March 2002

B-17. Educational Attainment of Population 25 Years and Over, by Metropolitan Area, March 2002

B-18. Educational Attainment of Population 18 Years and Over, by Age, Sex, Race, and Hispanic Origin, for the 15 Largest Metropolitan Areas, March 2002

HISTORICAL EDUCATIONAL ATTAINMENT CHARACTERISTICS

B-19. Years of School Completed by Population 25 Years and Over, by Age and Sex, Selected Years 1940 to 2002

B-20. Percent of Population 25 Years and Over Who Have Completed High School or College, by Race, Sex, and Hispanic Origin, Selected Years 1940 to 2002

B-21. Mean Earnings of Workers 18 Years and Over, by Educational Attainment, Race, Sex, and Hispanic Origin, 1975 to 2001

PART C—EDUCATION STATISTICS BY STATE

C-1. Population, School, and Student Characteristics by State

PART D—EDUCATION STATISTICS BY COUNTY

D-1. Population, School, and Student Characteristics by County

Preface

The fourth edition of *Education Statistics* brings together education-related data from several sources, including the U.S. Bureau of the Census and the National Center for Education Statistics (NCES). The data presented in Part A (School Enrollment) and Part B (Educational Attainment) are no longer available in print form from the Census Bureau. The data in Part D (school characteristics and finances by county) have been specially tabulated for this book from computer files of the NCES and from the 2000 Census.

Part A of this volume contains the most recent available national school enrollment data from the Census Bureau, relating to enrollment as of October 2000. Also included are historical tables on school enrollment, some of which go back as far as 1947.

Part B of this publication contains national data on educational attainment, measured by the highest grade of school completed and degrees received, from the March 2002 Current Population Survey. Historical data are also included, some dating to the 1940s.

Part C includes a variety of state-level data. Profiles of education in the 50 states and the District of Columbia are organized by geographic division, and are followed by a concise 14-page table with 120 key data items for the states. Data are from the Census Bureau, several key surveys of the NCES, and a few other sources. This section has been expanded to include state-level educational attainment, school enrollment, and high school completion data from the 2000 Census.

Part D of this volume contains recent education data tabulated for each county (or county equivalent) in the United States from the 2000 Census and from the NCES Common Core of Data (CCD) file for the 2000–2001 school year and the CCD Fiscal data file from the 1998–1999 school year. There are over 15,000 public school districts in the United States, with considerable variation in number and size among states. Most school district boundaries are not coterminous with county boundaries. In fact, in only a handful of states are school districts coextensive with county boundaries. We have aggregated these education statistics from school and school district files for those users who are interested in education statistics at the county level. Data items include total enrollment, minority enrollment, number of schools by level, number of teachers, dropout rates, percentage of students who are eligible for free or reduced-price lunches, and several indicators of school revenue and expenditures. We have included some geographic

codes (Federal Information Processing Standards or FIPS codes, and Beale codes) so that users can more readily relate these data to their own data sets. New in this year's edition are county-level data from the 2000 Census on educational attainment, school enrollment, and teenage high school completion.

Sources and definitions pertaining to each section follow the data tables in each section. Thus, definitions relating to school enrollment are in a section at the end of Part A: School Enrollment; definitions relating to educational attainment are in a section at the end of Part B: Educational Attainment; the various sources used for state data are described in a section at the end of Part C: Population, School and Student Characteristics by State; and the Common Core of Data and Census definitions used in developing the county aggregations are defined in a section at the end of Part D: Population, School and Student Characteristics by County.

The data in this volume meet the publication standards of the federal statistical agencies and the few non-governmental organizations from which they were obtained. Every effort has been made to select data that are accurate, meaningful, and useful. All statistical data are subject to error arising from sampling variability, reporting errors, incomplete coverage, imputation, and other causes. The responsibility of the editors and publisher of this volume is limited to reasonable care in the reproduction and presentation of data obtained from established sources.

The 2003 Edition has been edited by Deirdre Gaquin, Katherine DeBrandt, and Mary Meghan Ryan. Ms. Gaquin has over 25 years experience in the use and analysis of federal statistical data and holds a master's degree in urban planning. Ms. DeBrandt is a senior data analyst with Bernan and has a bachelor's degree in political science. Ms. Ryan is a Bernan data analyst with a bachelor's degree in economics. All co-editors participated in the compilation and presentation of the data.

Special thanks go to Kara Gottschlich, Bernan's production team leader, for managing the production aspects of this edition and for preparing the graphics; production assistant Christopher Jorgenson, who provided Ms. Gottschlich with support in preparing the layout; and staff editor Jacalyn Houston, who copy edited this edition, under the direction of managing editor Tamera Wells-Lee. Finally, thanks are due to the federal agency personnel who prepared the original data and generously responded to our requests for assistance.

PART A—SCHOOL ENROLLMENT

- In 2000, 69.6 million persons between the ages of 3 years and 34 years were enrolled in school. While this is a slight decrease from 1999, it represents the second highest enrollment yet measured. During the 1990s, the number of Americans between the ages of 3 years and 34 years remained steady at about 124 million, while the percentage of this population enrolled in school has steadily increased from about 50 percent to over 55 percent.
- While the number of high school students slightly decreased to 15.6 million in 2000, there was an increase in private school enrollment. The proportion of high school students in private schools rose to 8.5 percent in 2000, a percentage not matched since the mid-1980s. More than 43 percent of high school graduates between the ages of 18 years and 24 years went on to college.
- The high school dropout rate for grades 10 to 12 dipped slightly to 4.5 percent, with a significant drop to 3.9 percent for females, offsetting an increase among males. Both Blacks and Asian and Pacific Islanders had lower than average female dropout rates, and above average male rates. In 2000, high school dropouts between the ages of 14 years and 24 years reached a new low of 12.4 percent.
- The number of students 14 years and over enrolled in college has continued to grow, reaching 15.3 million in 2000. Over 35 percent of the population 18 years to 24 years were enrolled in college. The percentage of Blacks 18 years to 24 years of age enrolled in college exceeded 30 percent for the first time in 2000. Over 20 percent of Hispanics were also enrolled in college. Minorities represent 30 percent of students 14 years and over enrolled in college.
- Since 1979, the number of female college students has exceeded male students, and in 2000 the proportion of women marked a new high of 56.4 percent. The greatest disparity is among Black college students, where over 62 percent are women. Women also represented nearly 60 percent of all graduate students.

Table A-1. Enrollment Status of the Population 3 Years and Over, by Age, Sex, Race, Hispanic Origin, Nativity and Selected Educational Characteristics, October 2000

r = Revised, controlled to the 1990 census-based population estimates; previous 1993 data controlled to 1980-based population estimates.

Table A-20. Population 14 to 24 Years by High School Graduate Status, College Enrollment, Attainment, Sex, Race, and Hispanic Origin, October 1967 to 2000—Continued

(Numbers in thousands.)

Year, sex, race, and Hispanic origin	Total	Population 18 to 24 years					High school dropouts		High school graduates 14 to 24 years		
		High school graduates		Percent			Number	Percent	All graduates	Percent	
		Total students	Enrolled in college	High school graduates	Enrolled in college	High school graduates enrolled in college				Enrolled in college	Enrolled or completed some college

Note: The change in the educational attainment question and the college completion categories from "4 or more years of college," to "at least some college," in 1992 caused an increase in the proportion of 14-to-24-year-old high school graduates enrolled in college or completed some college, of approximately 5 percentage points. High school graduates are people who have completed 4 years of high school or more, for 1967 to 1991. Beginning in 1992, they were people whose highest degree was a high school diploma (including equivalency) or higher.

Because the following table is designed to be viewed as facing pages, please turn to page 128 for Table A-21.

NOTES AND DEFINITIONS: SCHOOL ENROLLMENT

All tables in Part A are derived from the October 2000 *Current Population Survey*. Comparable tables were disseminated by the U.S. Census Bureau in the P-20 series of Current Population Reports (CPR) for most years between 1947 and 1994; the data were collected through the October Current Population Survey (CPS). Since that time, the tables have not been available in printed form, but they are available on the U.S. Bureau of the Census Web site at <www.census.gov>. For information about the availability of earlier reports or data questions not addressed in this section, contact the Education and Social Stratification Branch, Population Division, U.S. Bureau of the Census at (301) 457-2464.

Age. Age classification is based on the age of the person at his/her last birthday.

Earnings. (*See Income*)

Educational attainment. Data on educational attainment are derived from a single question that asks, "What is the highest grade of school...has completed, or the highest degree...has received?"

The single educational attainment question now in use was introduced in the CPS beginning January 1992, and is similar to that used in the 1990 Decennial Census of Population and Housing. Consequently, data on educational attainment from the 1992 CPS are not directly comparable to CPS data from earlier years. The new question replaces the previous two-part question used in the CPS that asked respondents to report the highest grade they had attended, and whether or not they had completed that grade.

The questions on educational attainment apply only to progress in "regular" schools. Such schools include graded public, private, and parochial elementary and high schools (both junior and senior high schools), colleges, universities, and professional schools, whether day schools or night schools. Thus, regular schooling is that which may advance a person toward an elementary school certificate or high school diploma, or a college, university, or professional school degree. Schooling in other than regular schools was counted only if the credits obtained are regarded as transferable to a school in the regular school system.

Ethnic origin. People of Hispanic origin were identified by a question that asked for self-identification of the persons' origin or descent. Respondents were asked to select their origin (and the origin of other household members) from a "flash card" listing ethnic origins. People of

Hispanic origin, in particular, were those who indicated that their origin was Mexican, Puerto Rican, Cuban, Central or South American, or some other Hispanic origin. It should be noted that people of Hispanic origin may be of any race.

People who were of non-Hispanic White origin, were identified by crossing the responses to two self-identification questions: (1) origin or descent and (2) race. Respondents were asked to select their race (and the race of other household members) from a "flash card" listing racial groups. Beginning with March 1989, the population is divided into five groups on the basis of race: White; Black; American Indian, Eskimo or Aleut; Asian or Pacific Islander; and Other races. The last category includes any other race except the four mentioned. Respondents who selected their race as White and indicated that their origin was not one of the Hispanic origin subgroups Mexican, Puerto Rican, Cuban, Central or South American, were called Non-Hispanic White origin.

Family. A family is a group of two people or more (one of whom is the householder) related by birth, marriage, or adoption and residing together; all such people (including related subfamily members) are considered as members of one family. Beginning with the 1980 Current Population Survey, unrelated subfamilies (referred to in the past as secondary families) are no longer included in the count of families, nor are the members of unrelated subfamilies included in the count of family members. The number of families is equal to the number of family households; however, the count of family members differs from the count of family household members because family household members include any non-relatives living in the household.

Family household. A family household is a household maintained by a householder who is in a family (as defined above), and includes any unrelated people (unrelated subfamily members and/or secondary individuals) who may be residing there. The number of family households is equal to the number of families. The count of family household members differs from the count of family members, however, in that the family household members include all people living in the household, whereas family members include only the householder and his/her relatives. (See the definition of Family.)

Head Start. Children enrolled in Head Start programs or similar programs sponsored by local agencies to provide preschool education to young children are counted under nursery school or kindergarten as appropriate. (Also see, School, Nursery.)

Household. A household consists of all the people who occupy a housing unit. A house, an apartment or other

group of rooms, or a single room, is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters; that is, when the occupants do not live and eat with any other persons in the structure and there is direct access from the outside or through a common hall. A household includes the related family members and all the unrelated people, if any, such as lodgers, foster children, wards, or employees who share the housing unit. A person living alone in a housing unit, or a group of unrelated people sharing a housing unit such as partners or roomers, is also counted as a household. The count of households excludes group quarters. There are two major categories of households, “family” and “nonfamily”. (See definitions of Family household and Nonfamily household.)

Householder. The householder refers to the person (or one of the people) in whose name the housing unit is owned or rented (maintained) or, if there is no such person, any adult member, excluding roomers, boarders, or paid employees. If the house is owned or rented jointly by a married couple, the householder may be either the husband or the wife. The person designated as the householder is the “reference person” to whom the relationship of all other household members, if any, is recorded.

The number of householders is equal to the number of households. Also, the number of family householders is equal to the number of families.

Head versus householder. Beginning with the 1980 CPS, the Bureau of the Census discontinued the use of the terms “head of household” and “head of family.” Instead, the terms “householder” and “family householder” are used. Recent social changes have resulted in greater sharing of household responsibilities among the adult members and, therefore, have made the term “head” increasingly inappropriate in the analysis of household and family data. Specifically, beginning in 1980, the Census Bureau discontinued its longtime practice of always classifying the husband as the reference person (head) when he and his wife are living together.

Income, Official definition of. For each person in the sample 15 years old and over, the CPS asks questions on the amount of money income received in the preceding calendar year from each of the following sources: earnings; unemployment compensation; workers’ compensation; Social Security; Supplemental Security Income; Public assistance or welfare payments; veterans’ payments; survivor benefits; disability benefits; pension or retirement income; interest, dividends, rents, royalties, and estates and trusts; educational assistance; child support; alimony; financial assistance from outside the household; and other income.

It should be noted that although the income statistics refer to receipts during the preceding calendar year, the demographic characteristics, such as age, labor force status, and family or household composition, are as of the survey date. The income of the family/household does not include amounts received by people who were members during all or part of the income year if these people no longer resided in the family/household at the time of interview. However, the CPS collects income data for people who are current residents but did not reside in the household during the income year.

Data on consumer income collected in the CPS by the Census Bureau cover money income received (exclusive of certain money receipts such as capital gains) before payments for personal income taxes, Social Security, union dues, medicare deductions, etc. Therefore, money income does not reflect the fact that some families receive part of their income in the form of noncash benefits, such as food stamps, health benefits, rent-free housing, and goods produced and consumed on the farm. In addition, money income does not reflect the fact that noncash benefits are also received by some nonfarm residents, which often take the form of the use of business transportation and facilities, full or partial payments by business for retirement programs, medical and educational expenses, etc. Data users should consider these elements when comparing income levels. Moreover, readers should be aware that for many different reasons there is a tendency in household surveys for respondents to underreport their income. Based on an analysis of independently derived income estimates, the Census Bureau determined that respondents report income earned from wages or salaries much better than other sources of income and that the reported wage and salary income is nearly equal to independent estimates of aggregate income.

The Census Bureau collects data for the following income sources.

Earnings. The Census Bureau classifies earnings from longest job (or self-employment) and other employment earnings into three types:

Money wage or salary income is the total income people receive for work performed as an employee during the income year. This category includes wages, salary, armed forces pay, commissions, tips, piece-rate payments, and cash bonuses earned, before deductions are made for items such as taxes, bonds, pensions, and union dues.

Net income from nonfarm self-employment is the net money income (gross receipts minus expenses) from one’s own business, professional enterprise, or

partnership. Gross receipts include the value of all goods sold and services rendered. Expenses include items such as costs of goods purchased, rent, heat, power, depreciation charges, wages and salaries paid, and business taxes (not personal income taxes). In general, the Census Bureau considers inventory changes in determining net income from nonfarm self-employment; replies based on income tax returns or other official records do reflect inventory changes. However, when respondents do not report values of inventory changes, interviewers will accept net income figures exclusive of inventory changes. The Census Bureau does not include the value of saleable merchandise consumed by the proprietors of retail stores as part of net income.

Net income from farm self-employment is the net money income (gross receipts minus operating expenses) from the operation of a farm by a person on their own account, as an owner, renter, or sharecropper. Gross receipts include the value of all products sold, payments from government farm programs, money received from the rental of farm equipment to others, rent received from farm property if payment is made based on a percent of crops produced, and incidental receipts from the sale of items such as wood, sand, and gravel.

Operating expenses include items such as cost of feed, fertilizer, seed, and other farming supplies; cash wages paid to farmhands; depreciation charges; cash rent; interest on farm mortgages; farm building repairs; and farm taxes (not state and federal personal income taxes). The Census Bureau does not include the value of fuel, food, or other farm products used for family living as part of net income. In determining farm self-employment income, the Census Bureau considers inventory changes in determining net income only when they are accounted for in replies based on income tax returns or other official records that reflect inventory changes; otherwise, the Census Bureau does not take inventory changes into account.

Unemployment compensation. Unemployment compensation includes payments the respondent received from government unemployment agencies or private companies during periods of unemployment and any strike benefits the respondent received from union funds.

Workers' compensation. Workers' compensation includes payments people receive periodically from public or private insurance companies for injuries received at work.

Social Security. Social Security includes Social Security pensions and survivors' benefits and permanent disability insurance payments made by the Social Security Administration prior to deductions for medical insurance.

The Census Bureau does not include Medicare reimbursements for health services as Social Security benefits.

Supplemental Security Income. Supplemental Security Income includes federal, state, and local welfare agency payments to low-income people who are 65 years and over or people of any age who are blind or disabled.

Public assistance or welfare payments. Public assistance or welfare payments include cash public assistance payments low-income people receive, such as aid to families with dependent children (AFDC, ADC), temporary assistance to needy families (TANF), general assistance, and emergency assistance.

Veterans' payments. Veterans' payments include payments disabled members of the armed forces or survivors of deceased veterans receive periodically from the Department of Veterans Affairs for education and on-the-job training, and means-tested assistance to veterans.

Survivor benefits. Survivor benefits include payments people receive from survivors' or widows' pensions, estates, trusts, annuities, or any other types of survivor benefits. Respondents can report payments from 10 different sources: private companies or unions; federal government (Civil Service); military; state or local governments; railroad retirement; workers' compensation; Black lung payments; estates and trusts; annuities or paid-up insurance policies; and other survivor payments.

Disability benefits. Disability benefits include payments people receive as a result of a health problem or disability (other than those from Social Security). Respondents can report payments from 10 sources: workers' compensation; companies or unions; federal government (Civil Service); military; state or local governments; railroad retirement; accident or disability insurance; Black lung payments; state temporary sickness; or other disability payments.

Pension or retirement income. Pension or retirement income includes payments people receive from eight sources: companies or unions; federal government (Civil Service); military; state or local governments; railroad retirement; annuities or paid-up insurance policies; individual retirement accounts (IRAs), Keogh, or 401(k) payments; or other retirement income.

Interest income. Interest income includes payments people receive (or have credited to accounts) from bonds, treasury notes, IRAs, certificates of deposit, interest-bearing savings and checking accounts, and all other investments that pay interest.

Dividends. Dividends include income people receive from stock holdings and mutual fund shares. The CPS does not include capital gains from the sale of stock holdings as income.

Rents, royalties, and estates and trusts. Rents, royalties, and estates and trusts include net income people receive from the rental of a house, store, or other property, receipts from boarders or lodgers, net royalty income, and periodic payments from estate or trust funds.

Educational assistance. Educational assistance includes Pell Grants; other government educational assistance; any scholarships or grants; or financial assistance students receive from employers, friends, or relatives not residing in the student's household.

Child support. Child support includes all periodic payments a parent receives from an absent parent for the support of children, even if these payments are made through a state or local government office.

Alimony. Alimony includes all periodic payments people receive from ex-spouses. Alimony excludes one-time property settlements.

Financial assistance from outside the household. Financial assistance from outside the household includes periodic payments people receive from nonhousehold members. This type of assistance excludes gifts or sporadic assistance.

Other income. Other income includes all other payments people receive regularly that are not included elsewhere on the questionnaire. Some examples are state programs such as foster child payments, military family allotments, and income received from foreign government pensions.

Government transfers. Government transfers include payments people receive from the following sources: (1) unemployment compensation, (2) state workers' compensation, (3) Social Security, (4) Supplemental Security Income (SSI), (5) public assistance, (6) veterans' payments, (7) government survivor benefits, (8) government disability benefits, (9) government pensions, and (10) government educational assistance.

The Census Bureau does not count the following receipts as income: (1) capital gains people received (or losses they incur) from the sale of property, including stocks, bonds, a house, or a car (unless the person was engaged in the business of selling such property, in which case the CPS counts the net proceeds as income from self-employment); (2) withdrawals of bank deposits; (3) money borrowed; (4) tax refunds; (5) gifts; and (6) lump-sum inheritances or insurance payments.

The Census Bureau combines all sources of income into two major types:

Total money earnings. Total money earnings is the algebraic sum of money wages and salary and net income from farm and nonfarm self-employment.

Income other than earnings. Income other than earnings is the algebraic sum of all sources of money income except wages and salaries and income from self-employment.

Labor Force Status

Current job (basic data). For the employed, current job is the job held in the reference week (the week before the survey). Persons with two or more jobs are classified in the job at which the worker spends the most hours during the reference week. The unemployed are classified according to their latest full-time job lasting two or more weeks or by the job (either full time or part time) from which they were on layoff. The occupation/industry classification system for the 1990 Census of Population was used to code CPS data beginning with the January 1992 file.

Labor force. Persons are classified as being in the labor force if they are employed, unemployed, or in the Armed Forces during the survey week. The "civilian labor force" includes all civilians classified as employed or unemployed. The file includes labor force data for civilians age 15 and over. However, the official definition of the civilian labor force is age 16 and over.

Employed. Employed persons comprise (1) all civilians who, during the survey week, did any work at all as paid employees or in their own business or profession, or on their own farm, or who worked 15 hours or more as unpaid workers on a farm or a business operated by a member of the family; and (2) all those who have jobs but who are not working because of illness, bad weather, vacation, or labor-management dispute, or because they are taking time off for personal reasons, whether or not they are seeking other jobs. Each employed person is counted only once. Those persons who held more than one job are counted in the job at which they worked the greatest number of hours during the survey week. If they worked an equal number of hours at more than one job, they are counted at the job they have held the longest.

Unemployed. Unemployed persons are those civilians who, during the survey week, have no employment but are available for work and (1) have engaged in any specific job-seeking activity within the past four weeks such as registering at a public or private employment office, meeting with prospective employers, checking with

friends or relatives, placing or answering advertisements, writing letters of application, or being on a union or professional register; (2) are waiting to be called back to a job from which they had been laid off; or (3) are waiting to report to a new wage or salary job within 30 days. The unemployed include job leavers, job losers, new job entrants, and job reentrants.

Not in labor force. All civilians 15 years old and over who are not classified as employed or unemployed. These persons are further classified as being engaged in a major activity such as keeping house, going to school, unable to work because of long-term physical or mental illness, and other. The “other” group includes, for the most part, retired persons. Persons who report doing unpaid work in a family farm or business for less than 15 hours are also classified as not in the labor force.

For persons not in the labor force, questions on previous work experience, intentions to seek work again, desire for a job at the time of interview, and reasons for not looking for work are asked only in those households that are in the fourth and eighth months of the sample, that is, the “outgoing” groups—those that had been in the sample for three previous months and would not be in it for the subsequent month.

Finally, it should be noted that the unemployment rate represents the number of unemployed persons as a percentage of the civilian labor force 16 years old and over. This measure can also be computed for groups within the labor force classified by sex, age, marital status, race, etc. The job loser, job leaver, reentrant, and new entrant rates are each calculated as a percentage of the civilian labor force 16 years old and over; the sum of the rates for the four groups thus equals the total unemployment rate.

Level of school completed. The statistics on level of school indicate the number of persons enrolled at each of five levels: nursery school, kindergarten, elementary school (1st to 8th grades), high school (9th to 12th grades), and college or professional school. The last group includes graduate students in colleges or universities. Persons enrolled in elementary, middle school, intermediate school, or junior high school through the 8th grade are classified as being in elementary school. All persons enrolled in 9th through 12th grade are classified as being in high school.

Metropolitan-nonmetropolitan residence. The general concept of a metropolitan area (MA) is one of a large population nucleus, together with adjacent communities that have a high degree of economic and social integration with that nucleus. Some MAs are defined around two or more nuclei.

The MA classification is a statistical standard, developed for use by federal agencies in the production, analysis, and publication of data on MAs. The MAs are designated and defined by the Federal Office of Management and Budget, following a set of official published standards. These standards were developed by the interagency Federal Executive Committee on Metropolitan Areas, with the aim of producing definitions that are as consistent as possible for all MAs nationwide.

Each MA must contain either a place with a minimum population of 50,000 or a Census Bureau-defined urbanized area and a total MA population of at least 100,000 (75,000 in New England). An MA comprises one or more central counties, and an MA may also include one or more outlying counties that have close economic and social relationships with the central county. An outlying county must have a specified level of commuting to the central counties and also must meet certain standards regarding metropolitan character, such as population density, urban population, and population growth. In New England, MAs are composed of cities and towns rather than whole counties.

The territory, population, and housing units in MAs are referred to as “metropolitan.” The metropolitan category is subdivided into “inside central city” and “outside central city.” The territory, population, and housing units located outside MAs are referred to as “nonmetropolitan.”

To meet the needs of various users, the standards provide for a flexible structure of metropolitan definitions that classify an MA either as a metropolitan statistical area (MSA) or as a consolidated metropolitan statistical area (CMSA) that is divided into primary metropolitan statistical areas (PMSAs). Documentation of the MA standards and how they are applied is available from the Secretary, Federal Executive Committee on Metropolitan Areas, Population Division, U.S. Bureau of the Census, Washington, DC 20233.

Central city. In each MSA and CMSA, the largest place and, in some cases, additional places are designated as “central cities” under the official standards. A few PMSAs do not have central cities. The largest central city and, in some cases, up to two additional central cities are included in the title of the MA; there are also central cities that are not included in an MA title. An MA central city does not include any part of that city that extends outside the MA boundary.

Consolidated and primary metropolitan statistical area. If an area that qualifies as an MA has more than one million people, primary metropolitan statistical areas (PMSAs) may be defined within it. PMSAs consist of a

large urbanized county or cluster of counties that demonstrates very strong internal economic and social links, in addition to close ties to other portions of the larger area. When PMSAs are established, the larger area of which they are component parts is designated a consolidated metropolitan statistical area (CMSA).

Metropolitan statistical area. Metropolitan statistical areas are relatively freestanding MAs and are not closely associated with other MAs. These areas are typically surrounded by nonmetropolitan counties.

Modal grade. (see *School, Modal grade*)

Nonfamily household. A nonfamily household consists of a householder living alone (a one-person household) or where the householder shares the home exclusively with people to whom he/she is not related.

Population coverage. The universe for the CPS includes the civilian noninstitutional population of the United States and members of the Armed Forces in the United States living off post or with their families on post, but excludes all other members of the Armed Forces. The information on the Hispanic population from the CPS was collected in the 50 states and the District of Columbia and, therefore, does not include residents of outlying areas or U.S. territories such as Guam, Puerto Rico, and the Virgin Islands.

Race. The race of individuals was identified by a question that asked for self-identification of the person's race. Respondents were asked to select their race from a "flashcard" listing racial groups. The population is divided into five groups on the basis of race: White; Black; American Indian, Eskimo or Aleut; Asian or Pacific Islander; and Other races beginning with March 1989. The last category includes any other race except the four mentioned. In most of the published tables, "Other races" are included in the total population data line but are not shown individually.

Reference person. The reference person is the person to whom the relationship of other people in the household is recorded. The household reference person is the person listed as the householder (see definition of "Householder"). The subfamily reference person is either the single parent or the husband/wife in a married-couple situation.

Rounding. Percentages are rounded to the nearest 10th of a percent; therefore, the percentages in a distribution do not always add to exactly 100.0 percent.

School, dropout rate, annual high school. The annual high school dropout rate is an estimate of the proportion

of students who drop out of school in a single year. This section briefly explains how the annual dropout rate is calculated; for further explanation and details of its derivation; see Current Population Report, Series P-20, No. 413, "School Enrollment—Social and Economic Characteristics of Students: October 1983."

Annual dropout rates for a single grade (X) are estimated as the ratio of the number of people who were enrolled in grade (X) in the year preceding the survey and who did not complete grade (X) and are not currently enrolled, to the number enrolled in grade (X) at the start of the year preceding this survey. People reported as enrolled last year but not currently enrolled are presented in table 8 of Current Population Reports on school enrollment, by the highest grade completed and are presumed to have dropped out of the succeeding grade (except those who graduated this year). Thus, individuals counted as 10th grade dropouts are those not enrolled in school whose highest grade completed is the 9th grade. (They include not only those people who were enrolled in the 10th grade in the fall of the year preceding the survey and left school without completing the year, but also those people who finished the 9th grade in the spring preceding the survey and were not enrolled at the survey date.) These estimates form the numerator of estimates of the annual grade-specific dropout rate.

People currently enrolled in high school are presumed to have successfully completed and been enrolled in the preceding grade in the preceding year. Thus, those who have successfully completed the 10th grade are enrolled in the 11th grade. Along with the people who dropped out of that grade, they comprise the denominator of the estimate of the annual grade-specific dropout rate.

$$\text{Dropout from Grade } n = \frac{\text{Not enrolled and highest grade completed} = n-1}{(\text{Enrolled in } n+1 + \text{Not enrolled and highest grade completed} = n-1)}$$

Since people who complete the 12th grade cannot be presumed to enroll in college, the estimate of the number of people enrolled in the 12th grade one year prior to the survey is constructed as the sum of the number of people reported as having graduated from high school "this year" (both those enrolled in the first year of college and people not currently enrolled whose highest grade completed is the 12th grade) and those people not currently enrolled who were enrolled last year and whose highest grade completed is the 11th grade (dropouts). The annual dropout rate for all grades during one year can be obtained by summing the components of the rates for the individual grades—in other words, those people who were enrolled in the 10th, 11th, or 12th grade last year

and who are not currently enrolled and do not have a diploma.

In addition to the annual rate, two other estimates of dropouts are frequently used. The annual dropout rate is different from a "pool" (or status) measure such as the proportion of an age group who are high school dropouts (not enrolled in school, not high school graduates, which does not depend on when the individuals dropped out). A third measure of dropouts is the cohort measure, most commonly from a longitudinal study, in which one calculates the proportion of a specific group of people enrolled in a specific year, who had not received diplomas (and who were no longer in school) some years later. For example, the proportion of a cohort enrolled in 9th grade in year X, who were not enrolled and had not received a diploma by year $X + 4$.

School enrollment. The school enrollment statistics from the CPS are based on replies to the interviewer's inquiry as to whether the person was enrolled in regular school. Interviewers were instructed to count as enrolled anyone who had been enrolled at any time during the current term or school year in any type of public, parochial, or other private school in the regular school system. Such schools include nursery schools, kindergartens, elementary schools, high schools, colleges, universities, and professional schools. Attendance may be on either a full-time, or part-time basis and during the day or night. Regular schooling is that which may advance a person toward an elementary or high school diploma, a college, university, or professional school degree. Children enrolled in nursery schools and kindergarten are included in the enrollment figures for regular schools and are also shown separately.

Enrollment in schools that are not in the regular school system, such as trade schools, business colleges, and schools for the mentally handicapped, which do not advance students to regular school degrees, is not included.

People enrolled in classes which do not require physical presence in school, such as correspondence courses or other courses of independent study, and in training courses given directly on the job, are also excluded from the count of those enrolled in school, unless such courses are being counted for credit at a regular school.

School enrollment in year preceding current survey. An inquiry on enrollment in regular school or college in October of the preceding year was asked for all people (enrolled and not enrolled). In years before 1988, the question was asked only of people who were not currently attending regular school or were enrolled in college. In the tabulations of people enrolled in secondary school in

the previous year, people currently enrolled in high school were assumed to have been enrolled the previous year.

Comparability of enrollment data in previous years. Changes in the edit and tabulation packages used in processing the October CPS school enrollment supplement caused some minor revisions in the estimates. The current edit and tabulation package began with 1987 data. The 1986 data that were published in Current Population Report, Series P-20 No. 429, were reprocessed with the rewritten programs in order to clarify comparability. Time series tables usually show only the revised estimates for 1986. The previous edit and tabulation package was used from 1967 to 1986.

Major changes in the data due to the 1987 edit revisions were: (1) Among 14- and 15-year-olds, an edit improvement allowed people with enrollment data not reported, who were previously automatically imputed "not enrolled," to be enrolled; (2) Revisions in tabulation of enrollment in the previous year simplifies calculation of an annual high school dropout rate; (3) Edit improvements caused increases in college enrollment estimates, most notably above age 24; this age group was largely ignored in earlier edits; (4) Type of college is fully allocated (discussed earlier); (5) Tabulations of type of college (2-year, 4-year) are available by race; (6) Dependent family member is defined consistently; (7) New tabulations of employment status, vocational course enrollment, college retention and re-entry, and families with children enrolled in public and private school were available beginning in 1987.

In the series of reports on school enrollment for 1987 to 1992, race and Hispanic origin were erroneously tabulated for a small percentage of children 3 to 14 years old. Race and Hispanic origin of an adult in the household were attributed to the child, rather than using the child's reported characteristics. In the vast majority of cases, these characteristics were the same for family members, but for a small percentage of children, they were different. The correction made the following proportional changes in the numbers of children in each group: White (-0.5 percent), Black (+3.1 percent), Hispanic origin (-4.6 percent).

Published data on enrollment from the October CPS for 1981 to 1993 used population controls based on the 1980 Census. Beginning in 1994, estimates were based on 1990 Census population controls, including adjustment for undercount. Time series tables show two sets of data for 1993; the data labeled "1993r" were processed using population controls based on the 1990 Census, adjusted for undercount. The change in 1994 from a paper and pencil survey to a computer-assisted survey had some affect on

the data. Most notable, the enrollment question for children 3 to 5 years was different from the question for older children—it included a reference to nursery school. In 1994 reported nursery school enrollment was significantly higher than in earlier years.

College enrollment. The college enrollment statistics are based on replies to the interviewer's inquiry as to whether the person was attending or enrolled in school and the grade or school or year of college. Interviewers were instructed to count as enrolled anyone who had been enrolled at any time during the current term or school year, except those who have left for the remainder of the term. Thus, regular college enrollment includes those people attending a 4-year or 2-year college, university, or professional school (such as medical or law school) in courses that may advance the student toward a recognized college or university degree (e.g., BA or MA). Attendance may be either full time or part time, during the day or night. The college student need not be working toward a degree, but he/she must be enrolled in a class for which credit would be applied toward a degree. (See "school enrollment.") Students are classified by year of college, based on the academic year (not calendar year) they are attending. Undergraduate years are the 1st through 4th year, or freshman through senior. Graduate or professional school years include the 5th year and higher.

Two-year and four-year colleges. College students were asked to report whether the college in which they were enrolled was a 2-year college (junior or community college) or a 4-year college or university. Students enrolled in the first 4 years (undergraduates) were classified by the type of college they reported. Graduate students are shown as a separate group.

Attendance, full-time and part-time. College students were classified according to whether they were attending school on a full-time or part-time basis. A student was regarded as attending college full time if he/she was taking 12 or more hours of classes during the average school week, and part time if he/she was taking less than 12 hours of classes during the average school week.

Vocational school enrollment. Vocational school enrollment includes enrollment in business, vocational, technical, secretarial, trade, or correspondence courses that are not counted as regular school enrollment and are not for recreation or adult education classes. Courses counted as college enrollment should not also be included as vocational.

School, Level of. The statistics on level of school indicate the number of people enrolled at each of five levels—nursery school, kindergarten, elementary school (1st to

8th grades), high school (9th to 12th grades), and college or professional school. The last group includes graduate students in colleges or universities. People enrolled in elementary, middle school, intermediate school or junior high school through the 8th grade are classified as in elementary school. All people enrolled in 9th through 12th grade are classified as in high school.

School, Modal grade. Enrolled people are classified according to their relative progress in school: that is, whether the grade or year in which they were enrolled was below, at, or above the modal (or typical) grade for people of their age at the time of the survey. The modal grade is the year of school in which the largest proportion of students of a given age is enrolled.

School, Nursery. A nursery school is defined as a group or class that is organized to provide educational experiences for children during the year or years preceding kindergarten. It includes instruction as an important and integral phase of its program of child care. Private homes in which essentially custodial care is provided are not considered nursery schools. Children attending nursery school are classified as attending during either part of the day or the full day. Part-day attendance refers to those who attend either in the morning or in the afternoon, but not both. Full-day attendance refers to those who attend in both the morning and the afternoon. Children enrolled in Head Start programs or similar programs sponsored by local agencies to provide preschool education to young children are counted under nursery school.

School, Public or private. In this report, a public school is defined as any educational institution operated by publicly elected or appointed school officials and supported by public funds. Private schools include educational institutions established and operated by religious bodies, as well as those which are under other private control. In cases where enrollment was in a school or college which was both publicly and privately controlled or supported, enrollment was counted according to whether it was primarily public or private.

Undocumented immigrants or illegal aliens. Because all residents of the United States living in households are represented in the sample of households interviewed by the CPS, undocumented immigrants or illegal aliens are probably included in CPS data. Because the CPS makes no attempt to ascertain the legal status of any person interviewed, these individuals cannot be identified from CPS data.

Work experience. A person with work experience is one who, during the preceding calendar year, did any work for pay or profit or worked without pay on a family-operated farm or business at any time during the year, on a

part-time or full-time basis. A full-time worker is one who worked 35 hours or more per week during a majority of the weeks worked during the preceding calendar year. A year-round worker is one who worked for 50

weeks or more during the preceding calendar year. A full-time, year-round worker is a person who worked full time (35 or more hours per week) and 50 or more weeks during the previous calendar year.

PART B—EDUCATIONAL ATTAINMENT

- In 1940, only one in four Americans had completed high school. As recently as 1966, less than half of the U.S. population 25 years or older had high school diplomas. By 2002, 84.1 percent of Americans in that age group were high school graduates. In 2002, the high school graduation rate for women (84.4 percent) exceeded that of men (83.8 percent), marking the first statistical difference between the two sexes in over a decade.
- The percentage of college graduates, who made up less than 5 percent of the 1940 population, rose to almost 10 percent by 1966 and included close to 27 percent of the over-25 population by 2002. In recent years, women, non-Hispanic Whites, and Blacks have seen the most significant increases.
- The overall median earnings from salaries and self-employment for all persons 18 years and older in 2002 was \$26,500. For those who did not finish high school, the median was \$15,000. For high school graduates, median earnings rose to \$22,000, while those with a bachelor's degree had median earnings of \$39,500. The highest median was \$76,000 among persons with professional degrees (such as law or medicine).
- Among the population 25 years and over, the Northeast region had the highest proportion of college graduates (29 percent), followed by the West (28 percent), the Midwest (26 percent) and the South (25 percent).

Table B-1. Educational Attainment of the Population 15 Years and Over, by Age, Sex, Race, and Hispanic Origin, March 2002

(Numbers in thousands.)

Note: Data for 2001 and 2002 are from the expanded CPS sample and were created using population controls based on Census 2000 data. Beginning with data for 1992, a new question results in different categories than for earlier years. Data shown as "High School, 4 years" is now collected by the category "High School Graduate." Data shown as "College 1 to 3 years," is now collected by "Some College"; and two "Associate degree" categories. Data shown as "College 4 years or more," is now collected by the categories, "Bachelor's degree"; "Master's degree"; "Doctorate degree"; and "Professional degree." Because of the change in question format, median years of schooling cannot be derived. Total includes persons who did not report on years of school completed.

... = Not available.

Note: The earnings data for 2000 and 2001 are from the expanded CPS sample and were calculated using population controls based on Census 2000. Prior to 1991, Some college/Associate degree equals 1 to 3 years of college completed; Bachelor's degree equals 4 years of college; Advanced degree equals 5 or more years of college completed.

¹May be of any race.

NOTES AND DEFINITIONS: EDUCATIONAL ATTAINMENT

All tables in Part B are derived from the March 2002 Current Population Survey. Comparable tables were disseminated by the Census Bureau in the P-20 series of *Current Population Reports* for most years between 1947 and 1993. These tables have not been available in printed form since that time but are available on the Census Bureau's website at <www.census.gov>. We have included some tables here covering this entire historical period, including earnings by educational attainment shown in current dollars. In the historical data series, data prior to 1992 are not strictly comparable to those after that date. Before 1992, questions on degrees received were not asked in the Current Population Survey, and thus educational attainment was gauged only through years of school completed. For information about the availability of earlier reports or data questions not addressed in this section, contact the Education and Social Stratification Branch, Population Division, U.S. Bureau of the Census at (301) 457-2464.

Age. Age classification is based on the age of the person at his/her last birthday.

Citizenship status. There are five categories of citizenship status: 1) Born in the United States; 2) Born in Puerto Rico or another outlying area of the United States; 3) Born abroad of U.S. citizen parents; 4) Naturalized citizens; 5) Non-citizens. Place of birth was asked for every household member in the CPS sample, and for the parents of every household member. People born in the United States or its outlying areas, or whose parents were born in the United States or its outlying areas, were not asked citizenship questions. Citizenship status (1), (2), or (3) was assigned during the editing phase of data preparation based on the place of birth of the household member, or the place of birth of his or her parents. People born outside the United States and its outlying areas, and whose parents were born outside the United States and its outlying areas, were asked, "Are you a citizen of the United States." 'Yes' answers were assigned to the naturalized citizen category (4) and 'No' answers were assigned to the "Not a citizen" category (5) during the editing process. People for whom no birthplace was provided were assigned a citizenship status during the editing process. For example, the citizenship status of a child might have been assigned based on the citizenship status of his/her mother.

Country of birth. Birth place codes available in the CPS include; one code for the United States (fifty states and Washington, DC); one code for Puerto Rico; one code for all other outlying areas of the United States (American Samoa, Guam, U.S. Virgin Islands, Northern Marianas,

etc.); separate codes for 100 individual foreign countries or areas; residual codes for other cases (At Sea, etc.). People for whom no birthplace was provided were assigned a birthplace during the editing process based on several criteria. For example, the birthplace of a child might have been assigned based on the birthplace of its mother and/or father.

Country of birth and Year of entry. People born outside the United States (see Country of Birth) were asked the year they came to the United States to live. Persons in citizenship categories (2) to (5) (see Citizenship status) for whom no year of entry was reported were assigned a value for "Year of Entry" during the editing process based on other reported information.

Earnings. (See Income)

Educational attainment. Data on educational attainment are derived from a single question that asks, "What is the highest grade of school...has completed, or the highest degree...has received?"

The single educational attainment question now in use was introduced in the CPS beginning January 1992, and is similar to that used in the 1990 Decennial Census of Population and Housing. Consequently, data on educational attainment from the 1992 CPS are not directly comparable to CPS data from earlier years. The new question replaces the previous two-part question used in the CPS that asked respondents to report the highest grade they had attended, and whether or not they had completed that grade.

The questions on educational attainment apply only to progress in "regular" schools. Such schools include graded public, private, and parochial elementary and high schools (both junior and senior high schools), colleges, universities, and professional schools, whether day schools or night schools. Thus, regular schooling is that which may advance a person toward an elementary school certificate or high school diploma, or a college, university, or professional school degree. Schooling in other than regular schools was counted only if the credits obtained are regarded as transferable to a school in the regular school system.

Ethnic origin. People of Hispanic origin were identified by a question that asked for self-identification of the persons' origin or descent. Respondents were asked to select their origin (and the origin of other household members) from a "flash card" listing ethnic origins. People of Hispanic origin, in particular, were those who indicated that their origin was Mexican, Puerto Rican, Cuban, Central or South American, or some other Hispanic origin. It should be noted that people of Hispanic origin may be of any race.

People who were non-Hispanic White origin, were identified by crossing the responses to two self-identification questions: (1) origin or descent and (2) race.

Respondents were asked to select their race (and the race of other household members) from a “flash card” listing racial groups. Beginning with March 1989, the population is divided into five groups on the basis of race: White, Black, American Indian, Eskimo or Aleut, Asian or Pacific Islander, and Other races. The last category includes any other race except the four mentioned. Respondents who selected their race as White and indicated that their origin was not one of the Hispanic origin subgroups Mexican, Puerto Rican, Cuban, Central or South American, were called non-Hispanic White origin.

Family. A family is a group of two people or more (one of whom is the householder) related by birth, marriage, or adoption and residing together; all such people (including related subfamily members) are considered as members of one family. Beginning with the 1980 Current Population Survey, unrelated subfamilies (referred to in the past as secondary families) are no longer included in the count of families, nor are the members of unrelated subfamilies included in the count of family members. The number of families is equal to the number of family households; however, the count of family members differs from the count of family household members because family household members include any non-relatives living in the household.

Family household. A family household is a household maintained by a householder who is in a family (as defined above), and includes any unrelated people (unrelated subfamily members and/or secondary individuals) who may be residing there. The number of family households is equal to the number of families. The count of family household members differs from the count of family members, however, in that the family household members include all people living in the household, whereas family members include only the householder and his/her relatives. (See the definition of Family.)

Household. A household consists of all the people who occupy a housing unit. A house, an apartment or other group of rooms, or a single room, is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters; that is, when the occupants do not live and eat with any other persons in the structure and there is direct access from the outside or through a common hall. A household includes the related family members and all the unrelated people, if any, such as lodgers, foster children, wards, or employees who share the housing unit. A person living alone in a housing unit, or a group of unrelated people sharing a housing unit such as partners or roomers, is also counted as a household. The count of households excludes group quarters.

There are two major categories of households, “family” and “nonfamily.” (See definitions of Family household and Nonfamily household.)

Household, nonfamily. A nonfamily household consists of a householder living alone (a one-person household) or where the householder shares the home exclusively with people to whom he/she is not related.

Householder. The householder refers to the person (or one of the people) in whose name the housing unit is owned or rented (maintained) or, if there is no such person, any adult member, excluding roomers, boarders, or paid employees. If the house is owned or rented jointly by a married couple, the householder may be either the husband or the wife. The person designated as the householder is the “reference person” to whom the relationship of all other household members, if any, is recorded.

The number of householders is equal to the number of households. Also, the number of family householders is equal to the number of families.

Head versus householder. Beginning with the 1980 CPS, the Bureau of the Census discontinued the use of the terms “head of household” and “head of family.” Instead, the terms “householder” and “family householder” are used. Recent social changes have resulted in greater sharing of household responsibilities among the adult members and, therefore, have made the term “head” increasingly inappropriate in the analysis of household and family data. Specifically, beginning in 1980, the Census Bureau discontinued its longtime practice of always classifying the husband as the reference person (head) when he and his wife are living together.

Income, Official definition of. For each person in the sample 15 years and over, the CPS asks questions on the amount of money income received in the preceding calendar year from each of the following sources: earnings; unemployment compensation; workers’ compensation; Social Security; Supplemental Security Income; public assistance or welfare payments; veterans’ payments; survivor benefits; disability benefits; pension or retirement income; interest, dividends, rents, royalties, and estates and trusts; educational assistance; child support; alimony; financial assistance from outside the household; and other income.

It should be noted that although the income statistics refer to receipts during the preceding calendar year, the demographic characteristics, such as age, labor force status, and family or household composition, are as of the survey date. The income of the family/household does not include amounts received by people who were members during all or part of the income year if these people no

longer resided in the family/household at the time of interview. However, the CPS collects income data for people who are current residents but did not reside in the household during the income year.

Data on consumer income collected in the CPS by the Census Bureau cover money income received (exclusive of certain money receipts such as capital gains) before payments for personal income taxes, Social Security, union dues, Medicare deductions, etc. Therefore, money income does not reflect the fact that some families receive part of their income in the form of noncash benefits, such as food stamps, health benefits, rent-free housing, and goods produced and consumed on the farm. In addition, money income does not reflect the fact that noncash benefits are also received by some nonfarm residents, which often take the form of the use of business transportation and facilities, full or partial payments by business for retirement programs, medical and educational expenses, etc. Data users should consider these elements when comparing income levels. Moreover, readers should be aware that for many different reasons there is a tendency in household surveys for respondents to underreport their income. Based on an analysis of independently derived income estimates, the Census Bureau determined that respondents report income earned from wages or salaries much better than other sources of income and that the reported wage and salary income is nearly equal to independent estimates of aggregate income.

The Census Bureau collects data for the following income sources.

Earnings. The Census Bureau classifies earnings from longest job (or self-employment) and other employment earnings into three types:

(1) Money wage or salary income is the total income people receive for work performed as an employee during the income year. This category includes wages, salary, armed forces pay, commissions, tips, piece-rate payments, and cash bonuses earned, before deductions are made for items such as taxes, bonds, pensions, and union dues.

(2) Net income from nonfarm self-employment is the net money income (gross receipts minus expenses) from one's own business, professional enterprise, or partnership. Gross receipts include the value of all goods sold and services rendered. Expenses include items such as costs of goods purchased, rent, heat, power, depreciation charges, wages and salaries paid, and business taxes (not personal income taxes). In general, the Census Bureau considers inventory changes in determining net income from nonfarm self-employment; replies based on income tax returns or other official records do reflect inventory

changes. However, when respondents do not report values of inventory changes, interviewers will accept net income figures exclusive of inventory changes. The Census Bureau does not include the value of saleable merchandise consumed by the proprietors of retail stores as part of net income.

Net income from farm self-employment is the net money income (gross receipts minus operating expenses) from the operation of a farm by a person on their own account, as an owner, renter, or sharecropper. Gross receipts include the value of all products sold, payments from government farm programs, money received from the rental of farm equipment to others, rent received from farm property if payment is made based on a percent of crops produced, and incidental receipts from the sale of items such as wood, sand, and gravel.

(3) Operating expenses include items such as cost of feed, fertilizer, seed, and other farming supplies; cash wages paid to farmhands; depreciation charges; cash rent; interest on farm mortgages; farm building repairs; and farm taxes (not state and federal personal income taxes). The Census Bureau does not include the value of fuel, food, or other farm products used for family living as part of net income. In determining farm self-employment income, the Census Bureau considers inventory changes in determining net income only when they are accounted for in replies based on income tax returns or other official records that reflect inventory changes; otherwise, the Census Bureau does not take inventory changes into account.

Unemployment compensation. Unemployment compensation includes payments the respondent received from government unemployment agencies or private companies during periods of unemployment and any strike benefits the respondent received from union funds.

Workers' compensation. Workers' compensation includes payments people receive periodically from public or private insurance companies for injuries received at work.

Social Security. Social Security includes Social Security pensions and survivors' benefits and permanent disability insurance payments made by the Social Security Administration prior to deductions for medical insurance. The Census Bureau does not include Medicare reimbursements for health services as Social Security benefits.

Supplemental Security Income. Supplemental Security Income includes federal, state, and local welfare agency payments to low-income people who are 65 years and over or people of any age who are blind or disabled.

Public assistance or welfare payments. Public assistance or welfare payments include cash public assistance payments low-income people receive, such as aid to families with dependent children (AFDC, ADC), temporary assistance to needy families (TANF), general assistance, and emergency assistance.

Veterans' payments. Veterans' payments include payments disabled members of the armed forces or survivors of deceased veterans receive periodically from the Department of Veterans Affairs for education and on-the-job training, and means-tested assistance to veterans.

Survivor benefits. Survivor benefits include payments people receive from survivors' or widows' pensions, estates, trusts, annuities, or any other types of survivor benefits. Respondents can report payments from 10 different sources: private companies or unions; federal government (Civil Service); military; state or local governments; railroad retirement; workers' compensation; Black lung payments; estates and trusts; annuities or paid-up insurance policies; and other survivor payments.

Disability benefits. Disability benefits include payments people receive as a result of a health problem or disability (other than those from Social Security). Respondents can report payments from 10 sources: workers' compensation; companies or unions; federal government (Civil Service); military; state or local governments; railroad retirement; accident or disability insurance; Black lung payments; state temporary sickness; or other disability payments.

Pension or retirement income. Pension or retirement income includes payments people receive from eight sources: companies or unions; federal government (Civil Service); military; state or local governments; railroad retirement; annuities or paid-up insurance policies; individual retirement accounts (IRAs), Keogh, or 401(k) payments; or other retirement income.

Interest income. Interest income includes payments people receive (or have credited to accounts) from bonds, treasury notes, IRAs, certificates of deposit, interest-bearing savings and checking accounts, and all other investments that pay interest.

Dividends. Dividends include income people receive from stock holdings and mutual fund shares. The CPS does not include capital gains from the sale of stock holdings as income.

Rents, royalties, and estates and trusts. Rents, royalties, and estates and trusts include net income people receive from the rental of a house, store, or other property, receipts

from boarders or lodgers, net royalty income, and periodic payments from estate or trust funds.

Educational assistance. Educational assistance includes Pell Grants; other government educational assistance; any scholarships or grants; or financial assistance students receive from employers, friends, or relatives not residing in the student's household.

Child support. Child support includes all periodic payments a parent receives from an absent parent for the support of children, even if these payments are made through a state or local government office.

Alimony. Alimony includes all periodic payments people receive from ex-spouses. Alimony excludes one-time property settlements.

Financial assistance from outside the household. Financial assistance from outside the household includes periodic payments people receive from nonhousehold members. This type of assistance excludes gifts or sporadic assistance.

Other income. Other income includes all other payments people receive regularly that are not included elsewhere on the questionnaire. Some examples are state programs such as foster child payments, military family allotments, and income received from foreign government pensions.

Government transfers. Government transfers include payments people receive from the following sources: unemployment compensation; state workers' compensation; Social Security; Supplemental Security Income (SSI); public assistance; veterans' payments; government survivor benefits; government disability benefits; government pensions; government educational assistance.

The Census Bureau does not count the following receipts as income: capital gains people received (or losses they incurred) from the sale of property, including stocks, bonds, a house, or a car (unless the person was engaged in the business of selling such property, in which case the CPS counts the net proceeds as income from self-employment); withdrawals of bank deposits; money borrowed; tax refunds; gifts; and lump-sum inheritances or insurance payments.

The Census Bureau combines all sources of income into two major types:

Total money earnings. Total money earnings is the algebraic sum of money wages and salary and net income from farm and nonfarm self-employment.

Income other than earnings. Income other than earnings is the algebraic sum of all sources of money income except wages and salaries and income from self-employment.

Mean (Average) income. Mean (average) income is the amount obtained by dividing the total aggregate income of a group by the number of units in that group. The means for households, families, and unrelated individuals are based on all households, families, and unrelated individuals, respectively. The means (averages) for people are based on people 15 years old and over with income.

Median income. Median income is the amount which divides the income distribution into two equal groups—half having incomes above the median, half having incomes below the median. The medians for households, families, and unrelated individuals are based on all households, families, and unrelated individuals, respectively. The medians for people are based on people 15 years old and over with income.

Per capita income. Per capita income is the average income computed for every man, woman, and child in a particular group. The Census Bureau derived per capita income by dividing the total income of a particular group by the total population in that group (excluding patients or inmates in institutional quarters).

Labor Force Status

Current job (basic data). For the employed, current job is the job held in the reference week (the week before the survey). Persons with two or more jobs are classified in the job at which the worker spends the most hours during the reference week. The unemployed are classified according to their latest full-time job lasting two or more weeks or by the job (either full time or part time) from which they were on layoff. The occupation/industry classification system for the 1990 Census of Population was used to code CPS data beginning with the January 1992 file.

Labor force. Persons are classified as being in the labor force if they are employed, unemployed, or in the Armed Forces during the survey week. The “civilian labor force” includes all civilians classified as employed or unemployed. The file includes labor force data for civilians age 15 and over. However, the official definition of the civilian labor force is age 16 and over.

Employed. Employed persons comprise (1) all civilians who, during the survey week, did any work at all as paid employees or in their own business or profession, or on

their own farm, or who worked 15 hours or more as unpaid workers on a farm or a business operated by a member of the family; and (2) all those who have jobs but who are not working because of illness, bad weather, vacation, or labor-management dispute, or because they are taking time off for personal reasons, whether or not they are seeking other jobs. Each employed person is counted only once. Those persons who held more than one job are counted in the job at which they worked the greatest number of hours during the survey week. If they worked an equal number of hours at more than one job, they are counted at the job they have held the longest.

Unemployed. Unemployed persons are those civilians who, during the survey week, have no employment but are available for work and (1) have engaged in any specific job-seeking activity within the past four weeks such as registering at a public or private employment office, meeting with prospective employers, checking with friends or relatives, placing or answering advertisements, writing letters of application, or being on a union or professional register; (2) are waiting to be called back to a job from which they had been laid off; or (3) are waiting to report to a new wage or salary job within 30 days. The unemployed include job leavers, job losers, new job entrants, and job reentrants.

Not in labor force. All civilians 15 years and over who are not classified as employed or unemployed. These persons are further classified as being engaged in a major activity such as keeping house, going to school, unable to work because of long-term physical or mental illness, and other. The “other” group includes, for the most part, retired persons. Persons who report doing unpaid work in a family farm or business for less than 15 hours are also classified as not in the labor force.

For persons not in the labor force, questions on previous work experience, intentions to seek work again, desire for a job at the time of interview, and reasons for not looking for work are asked only in those households that are in the fourth and eighth months of the sample, that is, the “outgoing” groups—those that had been in the sample for three previous months and would not be in it for the subsequent month.

Finally, it should be noted that the unemployment rate represents the number of unemployed persons as a percentage of the civilian labor force 16 years and over. This measure can also be computed for groups within the labor force classified by sex, age, marital status, race, etc. The job loser, job leaver, reentrant, and new entrant rates are each calculated as a percentage of the civilian labor force 16 years and over; the sum of the rates for the four groups thus equals the total unemployment rate.

The statistics on level of school indicate the number of persons enrolled at each of five levels: nursery school; kindergarten; elementary school (1st to 8th grades); high school (9th to 12th grades); and college or professional school. The last group includes graduate students in colleges or universities. Persons enrolled in elementary, middle school, intermediate school, or junior high school through the 8th grade are classified as being in elementary school. All persons enrolled in 9th through 12th grade are classified as being in high school.

Marital status. The marital status classification identifies four major categories: never married, married, widowed, and divorced. These terms refer to the marital status at the time of the enumeration.

The category “married” is further divided into “married, spouse present,” “separated,” and “other married, spouse absent.” A person was classified as “married, spouse present” if the husband or wife was reported as a member of the household, even though he or she may have been temporarily absent on business or on vacation, visiting, in a hospital, etc., at the time of the enumeration. People reported as separated included those with legal separations, those living apart with intentions of obtaining a divorce, and other people permanently or temporarily separated because of marital discord. The group “other married, spouse absent” includes married people living apart because either the husband or wife was employed and living at a considerable distance from home, was serving away from home in the Armed Forces, had moved to another area, or had a different place of residence for any other reason except separation as defined above.

Single, when used as a marital status category, is the sum of never-married, widowed, and divorced people. “Single,” when used in the context of “single-parent family/household,” means only one parent is present in the home. The parent may be never-married, widowed, divorced, or married, spouse absent.

Metropolitan-nonmetropolitan residence. The general concept of a metropolitan area (MA) is one of a large population nucleus, together with adjacent communities that have a high degree of economic and social integration with that nucleus. Some MAs are defined around two or more nuclei.

The MA classification is a statistical standard, developed for use by federal agencies in the production, analysis, and publication of data on MAs. The MAs are designated and defined by the Federal Office of Management and Budget, following a set of official published standards. These standards were developed by the interagency Federal Executive Committee on Metropolitan Areas,

with the aim of producing definitions that are as consistent as possible for all MAs nationwide.

Each MA must contain either a place with a minimum population of 50,000 or a Census Bureau-defined urbanized area and a total MA population of at least 100,000 (75,000 in New England). An MA comprises one or more central counties, and an MA may also include one or more outlying counties that have close economic and social relationships with the central county. An outlying county must have a specified level of commuting to the central counties and also must meet certain standards regarding metropolitan character, such as population density, urban population, and population growth. In New England, MAs are composed of cities and towns rather than whole counties.

The territory, population, and housing units in MAs are referred to as “metropolitan.” The metropolitan category is subdivided into “inside central city” and “outside central city.” The territory, population, and housing units located outside MAs are referred to as “nonmetropolitan.”

To meet the needs of various users, the standards provide for a flexible structure of metropolitan definitions that classify an MA either as a metropolitan statistical area (MSA) or as a consolidated metropolitan statistical area (CMSA) that is divided into primary metropolitan statistical areas (PMSAs). Documentation of the MA standards and how they are applied is available from the Secretary, Federal Executive Committee on Metropolitan Areas, Population Division, U.S. Bureau of the Census, Washington, DC 20233.

Central city. In each MSA and CMSA, the largest place and, in some cases, additional places are designated as “central cities” under the official standards. A few PMSAs do not have central cities. The largest central city and, in some cases, up to two additional central cities are included in the title of the MA; there are also central cities that are not included in an MA title. An MA central city does not include any part of that city that extends outside the MA boundary.

Consolidated and primary metropolitan statistical area. If an area that qualifies as an MA has more than one million people, primary metropolitan statistical areas (PMSAs) may be defined within it. PMSAs consist of a large urbanized county or cluster of counties that demonstrates very strong internal economic and social links, in addition to close ties to other portions of the larger area. When PMSAs are established, the larger area of which they are component parts is designated a consolidated metropolitan statistical area (CMSA).

Metropolitan statistical area. Metropolitan statistical areas are relatively freestanding MAs and are not closely associated with other MAs. These areas are typically surrounded by nonmetropolitan counties.

Population coverage. The universe for the CPS includes the civilian noninstitutional population of the United States and members of the Armed Forces in the United States living off post or with their families on post, but excludes all other members of the Armed Forces. The information on the Hispanic population from the CPS was collected in the 50 states and the District of Columbia and, therefore, does not include residents of outlying areas or U.S. territories such as Guam, Puerto Rico, and the Virgin Islands.

Race. The race of individuals was identified by a question that asked for self-identification of the person's race. Respondents were asked to select their race from a "flashcard" listing racial groups. The population is divided into five groups on the basis of race: White; Black; American Indian, Eskimo or Aleut; Asian or Pacific Islander; and Other races beginning with March 1989. The last category includes any other race except the four mentioned. In most of the published tables, "Other races" are included in the total population data line but are not shown individually.

Reference person. The reference person is the person to whom the relationship of other people in the household is recorded. The household reference person is the person listed as the householder (see definition of "Householder"). The subfamily reference person is either the single parent or the husband/wife in a married-couple situation.

Regions, geographic. There are four regions: Northeast, Midwest (formerly North Central), West, and South. States and divisions within regions are presented below

Northeast

Connecticut, Maine, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, Vermont.

Midwest

Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Missouri, Nebraska, North Dakota, Ohio, South Dakota, Wisconsin.

South

Alabama, Arkansas, Delaware, District of Columbia, Florida, Georgia, Kentucky, Louisiana, Maryland, Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, Virginia, West Virginia.

West

Alaska, Arizona, California, Colorado, Hawaii, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington, Wyoming.

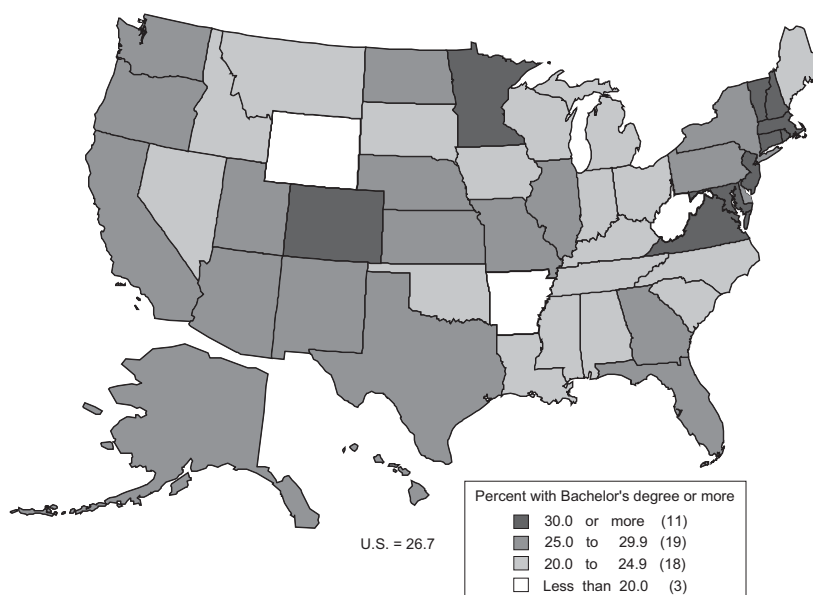

Rounding. Percentages are rounded to the nearest 10th of a percent; therefore, the percentages in a distribution do not always add to exactly 100.0 percent.

Undocumented immigrants or illegal aliens. Because all residents of the United States living in households are represented in the sample of households interviewed by the CPS, undocumented immigrants or illegal aliens are probably included in CPS data. Because the CPS makes no attempt to ascertain the legal status of any person interviewed, these individuals cannot be identified from CPS data.

Work experience. A person with work experience is one who, during the preceding calendar year, did any work for pay or profit or worked without pay on a family-operated farm or business at any time during the year, on a part-time or full-time basis. A full-time worker is one who worked 35 hours or more per week during a majority of the weeks worked during the preceding calendar year. A year-round worker is one who worked for 50 weeks or more during the preceding calendar year. A full-time, year-round worker is a person who worked full time (35 or more hours per week) and 50 or more weeks during the previous calendar year.

PART C—EDUCATION STATISTICS BY STATE

Percent with Bachelor's Degree or More, 2002

- The proportion of the population 25 years and over with a bachelor's degree increased to 26.7 percent. The proportion of graduates ranged from a high of 44.4 percent in the District of Columbia to 15.9 percent in West Virginia. Indiana had the largest increase, improving from 17.1 percent in 2000 to 23.7 percent in 2002.
- More than 47 million students were enrolled in public schools in 2000–2001, ranging from just under 69,000 in the District of Columbia to over 6 million in California. There were nearly 3 million public school teachers in the United States. This represented a 23.1 percent increase in the number of teachers over the 1990–1991 school year. During this period, the total number of students increased by 14.6 percent.
- About 10 percent of students were enrolled in private elementary or secondary schools. Southern and Northeastern states tended to have higher proportions of private school enrollment, while Western states had below average enrollment. Less than one-fourth of post-secondary enrollment was in private institutes of higher education.
- The national student/teacher ratio for public schools was 16.0. Vermont had the lowest ratio with 12.1, and Utah had the highest with 21.9. Average teacher salaries ranged from a high of \$53,281 in New Jersey to a low of \$30,265 in South Dakota. The national average in 2000–2001 was \$43,335.
- Teachers made up 51.6 percent of staff employed in public schools. The remainder consisted of instructional aides and coordinators, school and district administrators, administrative staff, guidance counselors, school and district support staff, and librarians.
- Public school expenditures reached \$323 billion in the 1999–2000 school year. Just over 60 percent went towards instruction, while support services and non-instructional costs accounted for the remaining 40 percent. Expenditures per student totaled \$6,911, with a low of \$4,378 in Utah, a state with a high proportion of school-age population, to \$10,337 in New Jersey.

NEW ENGLAND STATES:

Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, and Vermont are the New England states. Together, they account for 4.9 percent of the U.S. population, and with 2.2 million public school students, 4.7 percent of the nation's students. The New England states have 1,136 school districts, ranging from 280 in Maine to 36 in Rhode Island. These states have consistently ranked above average on most educational measures.

With most of the nation's population growth occurring in the West and the South, the six New England states have all had below average growth during the 1990s. Maine is one of eight states with a decrease in the number of students from 1990 to 2000, when its public school enrollment declined to just over 200,000. New Hampshire's public school enrollment increased by more than 20 percent from 1990 to 2000, while its total population increased by only 11.4 percent during the same period. The New England states have a comparatively small proportion of their populations between the ages of 5 years and 17 years. Nationally, 18.9 percent of the population is between 5 years and 17 years, while in New England only 17.8 percent is school-aged. At 17.4 percent, Massachusetts has the fourth smallest proportion in the United States.

Along with fewer students, these states have below average student-to-teacher ratios. Vermont has the lowest in the nation, with 12.1 students per teacher in 2000–2001. Both Connecticut and Maine are among the lowest 10 in the United States. Rhode Island has the highest in the division, with 14.8 students per teacher, which is still well below the national average of 16.0. With the exception of Maine, all the states in New England have an above average proportion of private school students.

New Hampshire has the smallest proportion of students in the United States who are eligible for free or reduced-price lunch. All the New England states have below average proportions of children under 18 years living in poverty. Connecticut and New Hampshire are among 10 states with less than 10 percent in poverty. Connecticut leads the nation with the highest median income for a family of four. Massachusetts and New Hampshire are also among five states with incomes of more than \$70,000 per family. The national median income is \$62,288.

New England's teacher salaries range from a high of \$52,693 in Connecticut to \$36,373 in Maine. The average in the United States is \$43,335. Connecticut ranks second in the nation, just behind New Jersey. Connecticut, Rhode Island, Massachusetts, and Vermont all rank among the 10 highest expenditures per student in the nation. New Hampshire spends \$6,860 per student, making it the only state in New England with below average expenditures. All six states direct more than 63 percent of

public school expenditures to instruction. Maine ranks second in the nation with 66.9 percent.

Massachusetts and Connecticut have among the highest proportions of students in grades 4 and 8 scoring at or above the proficient level on the National Assessment of Educational Progress project, which tests knowledge and skills in such subjects as math, reading, science, and writing. More than 7 percent of the 1.3 million high school juniors taking the Preliminary Scholastic Assessment Test (PSAT)/National Merit Scholarship Qualifying Test (NMQT) reside in New England. Connecticut and Massachusetts have among the highest proportion of students scoring above 65, a level that may qualify them for National Merit Scholarships.

High school students in New England tend to choose the SAT over the ACT. In 2002, more than 80 percent of Connecticut's high school graduates took the SAT, the highest proportion in the nation. The other states in New England were all well above the national average of 46 percent. As with most states with high proportions of test-takers, the average scores tend to be lower. The New England average scores were close to the national average of 1,020. New Hampshire had the highest in the division with 1,038, and Maine, the lowest, with 1,005. All six states had 10 percent or less of their students taking the ACT test.

The New England states, with the exception of Rhode Island, exceed 86 percent with a high school diploma. From 1998 to 2002, New Hampshire had the largest percentage increase in high school attainment levels. In 1998, the state ranked 28th in the nation with 84 percent, and by 2002 had climbed to sixth in the nation with 90.2 percent. Connecticut also showed substantial improvement, and is ranked 14th in the nation with 88 percent of its population having graduated from high school. Just over 80 percent of Rhode Island's residents are high school graduates. It is the only state in New England that is below the U.S. average high school attainment level of 84.1 percent.

The six New England states have college attainment levels among the top in the nation. Massachusetts ranks fifth in the nation, with 34.3 percent of its population holding a bachelor's degree. Despite its lower high school attainment levels, Rhode Island has a high proportion of college graduates, placing it among 10 states and the District of Columbia with proportions exceeding 30 percent. Only Maine has a below average proportion of college graduates and is ranked 33rd in the United States.

The New England states have 5.5 percent of the country's college students, with slightly less than half enrolled in private schools. Because of the significant number of small private colleges, all six states rank in the top 10 in the nation for proportion of private college students. Master's degrees and doctorates accounted for about a third of degrees conferred in 1999–2000 in Connecticut and Massachusetts. These high proportions are exceeded only by the District of Columbia.

MIDDLE ATLANTIC STATES:

The Middle Atlantic division of the United States has just three states: New Jersey, New York, and Pennsylvania. However, these states are among the 10 largest in the nation, totaling nearly 40 million people or 14.1 percent of the U.S. population. While the U.S. population grew by 13.2 percent from 1990 to 2000, none of these three states had growth rates above 9 percent. Texas surpassed New York to become the second largest state in the nation.

With 7.1 million people between the ages of 5 years and 17 years, the Middle Atlantic states account for 13.5 percent of the nation's student-age population. All three states have below average proportions of school-age children. Together, New Jersey, New York, and Pennsylvania have just over 6 million students enrolled in public elementary and secondary schools. New Jersey's student membership in public schools increased by 20 percent from 1990 to 2000, placing the state among nine states with growth of 20 percent or more. All the states in the Middle Atlantic division had a greater percentage increase in teachers than in students during the 1990s. By 2000, New York became one of three states where the number of public school teachers exceeded 200,000. The three Middle Atlantic states have among the 10 highest proportions of students attending private schools, with over 1 million children enrolled in private school during the 1999–2000 school year.

The Middle Atlantic division has 1,782 school districts, with New York having the most of the three (701). The number of schools range from 4,292 in New York to 2,407 in New Jersey. Minorities make up nearly half of New York's public school students, while in Pennsylvania they total less than 23 percent. New Jersey has the fourth lowest student-to-teacher ratio in the United States. Both New York, at 13.9, and Pennsylvania, at 15.5, have ratios below the national average. More than one-third of teachers in New Jersey and New York are over the age of 50 years, ranking both states among the top 10 in the United States.

New Jersey has the highest expenditures per student. New Jersey and the District of Columbia are the only jurisdictions where expenditures per student exceed \$10,000. New York ranks third with \$9,846. The national average during the 1999–2000 school year was \$6,911. With over 68 percent spent for instruction, New York ranks first in the nation. New Jersey is among the bottom 10, with less than 59 percent going toward instruction. At 62.7 percent. Pennsylvania's proportion for instruction is close to the national average. New York's expenditures for public elementary and secondary schools exceed \$28 billion, second only to California.

More than 40 percent of New York students are eligible for free or reduced-price lunch. In both Pennsylvania

and New Jersey, less than 30 percent qualify. One in five New York children under 18 years of age lived in poverty in 2000. New Jersey is one of 10 states with less than 10 percent of students in poverty. The median incomes of a family of four in the Middle Atlantic states exceed the U.S. average. New Jersey has the second highest in the country with \$78,560. The average teacher salary in New Jersey is over \$53,000, ranking the state first in the nation. New York and Pennsylvania are also among the top 10, with each surpassing \$49,000. The U.S. average is \$43,335.

Both Pennsylvania and New Jersey had dropout rates at or below 4 percent, ranking them among the bottom 10 of the 36 states that reported dropout rates. New York has no dropout data. However, 8.7 percent of New Yorkers between the ages of 16 years and 19 years were not high school graduates and not enrolled in school at the time of the 2000 Census. In New Jersey, this proportion was 7.2 percent, and in Pennsylvania, 7.1 percent. Nationally, 9.8 percent of these teenagers are neither enrolled in school nor high school graduates.

The Middle Atlantic states have average levels of high school attainment, ranging from 83.7 percent in New York to 86.1 percent in Pennsylvania. The U.S. average is 84.1 percent. New Jersey is 1 of 10 states where the proportion of high school graduates has decreased since 1998.

New Jersey has the second highest proportion of high school graduates taking the SAT in 2002. New York and Pennsylvania are also among the top 10. States along the east coast, especially those in the Northeast, have higher proportions taking the SAT rather than the ACT. The average scores range from 998 in Pennsylvania to 1,011 in New Jersey. The national average is 1,020. Less than 10 percent of high school graduates took the ACT in New Jersey and Pennsylvania, and in New York, just 14 percent took the test. New York tied for the fifth highest average ACT score in the United States.

College attainment levels are slightly below average in Pennsylvania, and above average in New Jersey and New York. With 31.4 percent, New Jersey is among the highest in the nation. Pennsylvania's proportion has increased by 4 percentage points to 26.1 percent from 1998 to 2002. Both New York and Pennsylvania have high proportions of enrollment in private institutions of higher education. Both states exceed 44 percent, while nationally less than 25 percent of students are enrolled in private colleges. More than 13 percent of the nation's college students are enrolled in schools in the Middle Atlantic states. New York confers the highest number of professional, master's degrees, and doctorates. New York accounts for 9.5 percent of the nation's graduate enrollment, and 6.5 percent of undergraduates.

EAST NORTH CENTRAL STATES:

The East North Central division borders the Great Lakes, and is made up of Illinois, Indiana, Michigan, Ohio, and Wisconsin. They account for 45 million people, and 16 percent of the U.S. population. These five states have 8.6 million people between the ages of 5 years and 17 years, which amounts to 16.2 percent of the nation's school-age population.

There are close to 7.5 million students enrolled in public schools in the nearly 3,000 school districts in these five states. Wisconsin, Illinois, and Ohio have above average proportions of their students attending private schools. Within all five of the states, nearly 1 million are enrolled in private schools. Illinois has the largest proportion of minority students in the region, with Blacks and Hispanics comprising more than 35 percent of public school students.

Illinois, Wisconsin, and Michigan had average growth in public school membership from 1990 to 2000. Indiana and Ohio each had below average growth of 3.6 percent, well below the U.S. average of 14.6 percent. The number of teachers in Wisconsin grew by 26.4 percent, the only East North Central state with an above average growth. Indiana had the smallest growth in the division, with 8.1 percent. The five states had nearly half a million public school teachers during the 2000–2001 school year. More than 57 percent of Wisconsin staff employed by public elementary and secondary schools are teachers, well above the U.S. average of 51.6 percent. As a result, Wisconsin has fewer instructional aides and support staff.

All of the reporting East North Central states have less than 30 percent of their students qualifying for free or reduced-price lunch. (Illinois has no data.) Of the states with data nationally, more than half exceed 30 percent. All five East North Central states have a smaller than average proportion of children living in poverty. The states range from a high of 16.2 percent in Ohio to 11.3 percent in Indiana. The U.S. average is 16.3 percent. Both Wisconsin and Michigan have less than 4 percent of low-income children without health insurance, which is well below the national average of 7.9 percent.

Michigan has the eighth highest median income of a family of four in the United States, and Illinois is ranked 10th. The other states of the East North Central division all have incomes exceeding \$62,000. Average public school teacher salaries in these five states are above the U.S. average of \$43,335. They range from a high of \$50,694 in Michigan to \$42,122 in Wisconsin.

Michigan has one the 10 highest student-to-teacher ratios in the nation. The other states in the area are closer to the U.S. average ratio of 16.0, except for Wisconsin, which is well below average with 14.1 students per

teacher. More than one in five Indiana teachers is below 30 years of age. Michigan is one of 10 states with per pupil expenditures exceeding \$8,000. The other four states of the East North Central division all surpass the U.S. average of \$6,911 per student. Both Illinois and Michigan spend more than \$13 billion a year on public schools. Michigan spends 58.1 percent on instruction, which is among the lowest proportions in the United States.

All these states by the Great Lakes have high levels of high school attainment, surpassing the national average of 84.1 percent. They range from a high of 87.3 percent in Ohio, to 85.3 percent in Indiana. Wisconsin was one of 10 states with a decrease in the proportion of high school graduates from 1998 to 2000. Overall, Wisconsin ranked 24th in the nation.

Wisconsin has the second lowest reported dropout rate of 2.6 percent. With a dropout rate of 6.2 percent, Illinois ranks fourth among the 36 states with data. Ohio has an above average rate of 5.0, and neither Michigan, nor Wisconsin has data. Just 6.4 percent of Wisconsin teenagers between 16 years and 19 years are not in high school, and have not graduated. This places the state among just eight states with proportions less than 7 percent. Illinois and Indiana have the highest proportions in the region, both states near the national average of 9.8 percent.

Wisconsin has the third highest average SAT score in the nation, but only 7 percent of graduating students took the test in 2002. Of all the states in this part of the country, only in Indiana do graduates overwhelmingly choose the SAT over the ACT. Indiana also has the lowest average score in the region, with 1,001. In Illinois, 99 percent of graduating seniors took the ACT. Wisconsin, Michigan, and Ohio each had more than 60 percent of graduates take the test. The scores ranged from a high of 22.2 in Wisconsin to 20.1 in Illinois.

Only Illinois has a proportion of college graduates exceeding the U.S. average. The other states of the East North Central division have proportions lower than 25 percent, ranging from 24.7 percent in Wisconsin to 22.5 percent in Michigan. Indiana has improved by more than 6 percentage points since 1998, going from 48th in the nation to 34th.

There are more than 2.4 million students enrolled in institutions in higher education in the states that border the Great Lakes. One-fourth or more of college students in Illinois and Ohio attend private colleges. Michigan has the lowest proportion in the East North Central division with 17.4 percent. Nearly 400,000 degrees were conferred by institutions of higher education in these states, which represented 16.6 percent of degrees in 1999–2000.

WEST NORTH CENTRAL STATES:

Iowa, Kansas, Minnesota, Missouri, Nebraska, North Dakota, and South Dakota are the seven states of the West North Central division. There are nearly 3.7 million people of student-age living in these states. Expenditures for public schools exceeded \$21 billion during the 1999–2000 school year.

The West North Central states total more than 19 million people. With the exception of Missouri and Minnesota, these states rank among the lower half in the nation by population size. Both Dakotas are among the seven states and the District of Columbia with populations of less than 1 million. Missouri has the highest total population of the group, and ranks 17th in the nation. All seven states had lower than average population growth from 1990 to 2000. North Dakota grew by 0.5 percent during the decade, ranking only above the District of Columbia for population growth. Minnesota added more than half a million people during the 1990s, giving the state the highest population growth in the area with 12.4 percent change.

This region has a slightly higher proportion of population between 5 years and 17 years of age. In South Dakota, Kansas, Minnesota, and Nebraska, 19.5 percent or more of the populations are school-aged. Nationally, 18.9 percent of the population falls between the ages of 5 years and 17 years. Together these states total 3.2 million students enrolled in public schools, which is 6.9 percent of the students in the United States. The number of school districts ranges from 544 in Nebraska to 173 in South Dakota. There are 366,513 students attending private schools, which gives the division a higher than average proportion. Nebraska and Missouri have among the 15 highest proportions of students attending private schools in the nation.

Student/teacher ratios are at or below the U.S. average in the West North Central states. North Dakota, Nebraska, and South Dakota rank among the lowest 10 in the nation—each of these states has fewer than 14 students per teacher. The national average is 16.0 students per teacher. Minnesota is the only state in the division with above average per student expenditures. North and South Dakota rank among the lowest 10 in the nation, with less than \$5,700 spent per student.

Iowa and Minnesota have small proportions of students eligible for free or reduced-price lunch. Of the 45 states and District of Columbia with data, these two states rank among the lowest eight, with less than 27 percent eligible. Iowa, South Dakota, and Minnesota have low proportions of children in poverty. They are among 10 states with a children's poverty rate of less than 10 percent. Nationally, 16.3 percent of children under 18 years live in poverty. In North Dakota, 19.5 percent of children live in poverty.

Minnesota is one of seven states with a median income of a family of four exceeding \$70,000 per year. North Dakota has the lowest median income of the West North Central states with \$53,140. The U.S. average is \$62,228. Average teacher salaries tend to be lower in the West North Central states. Only Minnesota exceeds \$40,000, but the state's average salary remains below the U.S. average of \$43,335. North and South Dakota have the two lowest average teacher salaries in the nation. However, the cost of living in these states tends to be lower, and the highest average salaries can be found mostly in states in the northeast.

Minnesota tied Alaska for the highest high school attainment level in the nation, and is one of six states with attainment levels exceeding 90 percent. The other states in the division range from 89.8 percent in Nebraska to 87.5 percent in Kansas. All of these states are well above the U.S. average of 84.1 percent in 2002. Both Missouri and North Dakota had an increase of 4.7 percentage points or more from 1998 to 2000. Nationally, the high school attainment level increased by 1.3 percentage points during this period.

All the West North Central states, except Kansas, reported on dropout rates, and these all had rates below 4.5. Of the 36 states and the District of Columbia with dropout data, Iowa, Wisconsin, and North Dakota have the three lowest rates, the only states under 3.0. Missouri (4.4) and Minnesota (4.3) have the highest rates of the division. With the exception of Missouri, these states have 8 percent or lower proportions of children between 16 years and 19 years who are neither enrolled in high school, nor have graduated. Missouri is the only one of these states that exceeds the U.S. average of 9.8 percent.

All seven states of the West North Central division are in the top 10 states when ranked by SAT scores, and surpass the national average by more than 100 points. However, in each of these states 10 percent or less of high school graduates take the test. High school students in this division tend to take the ACT over the SAT. In each of these states, 65 percent or more of graduates took the ACT. In Kansas and North Dakota, more than three-fourths of graduates take the ACT, while the U.S. average is 39 percent. In most states with a high proportion of test-takers, the average scores tend to be lower. However, in the West North Central division, the averages in all seven states exceed the national average of 20.8. Minnesota and Iowa are among the top 10 states in the nation, with average scores of 22.0 or higher.

College attainment levels in the West North Central division range from 30.5 percent in Minnesota to 23.1 percent in Iowa. Minnesota is one of 10 states and the District of Columbia to surpass 30 percent. The U.S. average is 26.7 percent. Nebraska had the second highest percentage point increase from 1998 to 2000. The state was ranked 36th in the nation in 1998, and 18th in 2002.

SOUTH ATLANTIC STATES:

The South Atlantic division of the United States includes Delaware, the District of Columbia, Florida, Georgia, Maryland, North Carolina, South Carolina, Virginia, and West Virginia. This is the largest division in the nation, with over 51 million people, and over 8 million students enrolled in public elementary and secondary schools.

Most of the South Atlantic states have a lower than average proportion of children between the ages of 5 years and 17 years. The District of Columbia has the lowest in the nation, with 14.4 percent. It can be misleading to compare the District of Columbia with the 50 states, rather than with other cities. Unlike any of the states, it has an entirely urban population, so its characteristics are more similar to other large cities. West Virginia and Florida are second and third, respectively, the only two states with proportions of school-age children under 17 percent. Nationally, 18.9 percent of the population is school-aged. Florida has the fourth largest public school population in the country, and the District of Columbia has the smallest.

There are 687 school districts in this division, ranging from 180 in Georgia to one in the District of Columbia. The proportion of students attending private schools varies within the South Atlantic division. The District of Columbia, Maryland, and Delaware have above average private school enrollment, while West Virginia, North Carolina, South Carolina, and Georgia have much smaller proportions enrolled in private schools.

Virginia has the second lowest student-to-teacher ratio in the United States. Both West Virginia and the District of Columbia have ratios of less than 14 students per teacher. Of the South Atlantic states, only Florida and Maryland exceed the national average of 16.0 students per teacher. More than 20 percent of teachers in Delaware and North Carolina are under 30 years of age, ranking them first and second in the nation. Less than 6 percent of West Virginia public school teachers are under 30, which is the lowest proportion in the United States.

Per student expenditures range from \$10,337 in the District of Columbia, second only to New Jersey, to \$5,831 in Florida. Delaware, Maryland, and West Virginia all have per student expenditures exceeding the U.S. average of \$6,911. Florida has the highest total expenditures in the division, with \$13 billion, one of nine states exceeding \$10 billion per year. North Carolina directs over 63 percent of its expenditures to instruction, which is among the 10 highest proportions in the nation. The District of Columbia has the lowest proportion of expenses for instruction, with more than 58 percent of expenditures for support services and non-instruction costs.

The District of Columbia has the highest proportion of students who qualified for free or reduced-price lunch, exceeding 60 percent eligibility along with Mississippi. West Virginia is the only other state in the division where more than 50 percent of the students qualify. More than 30 percent of children in the District of Columbia live in poverty.

South Carolina and West Virginia both have more than 20 percent of children under 18 years living in poverty. Maryland, Virginia, and Delaware have among the 10 lowest poverty rates in the nation. With 7.6 percent, Maryland ties with Iowa for the smallest proportion of children in poverty.

Maryland has the fourth highest median income of a family of four, with \$77,562. Delaware also ranks among the top 10 states. West Virginia has the third lowest median family income in the nation, at \$46,270. Only the District of Columbia, Delaware, and Maryland have average public school teacher salaries exceeding the U.S. average of \$43,335. All three states have average salaries above \$45,000 per year. The District of Columbia ranks among the top 10, with an average of \$48,704. West Virginia has the lowest of the South Atlantic states, at \$35,888.

Georgia and the District of Columbia tie for the second highest dropout rate in the nation. Of the 37 jurisdictions with data, the other South Atlantic states rank in the lowest third. In both Georgia and North Carolina, over 12 percent of teenagers between the ages of 16 years and 19 years have not graduated from high school and are not enrolled. These are among the five highest proportions in the nation, and well above the U.S. average of 9.8 percent. Both Maryland and Virginia have less than 8 percent of teens not enrolled and without diplomas.

With the exception of West Virginia, most high school seniors in the South Atlantic states take the SAT. In the District of Columbia, more than three-fourths of graduates take the SAT. Among the other states in the division, proportions range from 69 percent in Delaware to 18 percent in West Virginia. The District of Columbia, Georgia, South Carolina, Florida, and North Carolina are among seven states with average scores of less than 1,000. The U.S. average is 1,020. As with most states with a small proportion of test-takers, West Virginia has above average scores of 1,040. The proportion of ACT test-takers ranges from 61 percent in West Virginia, the only state in the division that exceeds 50 percent, to 4 percent in Delaware. Not surprisingly, Delaware has the highest score in the South Atlantic division, with 21.3. The District of Columbia, South Carolina, Georgia, and North Carolina have among the lowest 10 ACT scores in the nation.

The District of Columbia has the highest proportion of college graduates in the nation. In 2002, over 44 percent of the city's residents held bachelor's degrees, which is well above the national average of 26.7 percent. Maryland ranks second with 37.6 percent, and Virginia, fourth, with 34.6 percent. West Virginia has the lowest college attainment levels in the nation, with just 15.9 percent of the population holding bachelor's degrees. North Carolina and South Carolina are the only other states in the division with less than 25 percent of their populations with college degrees. From 1998 to 2002, the District of Columbia had the largest increase in its level of college attainment, with an improvement of 7.9 percentage points. West Virginia is one of eight states with a decrease in college attainment levels from 1998 to 2002.

High School Attainment in the East South Central States, 2002

College Attainment in the East South Central States, 2002

EAST SOUTH CENTRAL STATES:

The East South Central states fall below the U.S. average on most educational measures. This division, comprising Alabama, Kentucky, Mississippi, and Tennessee, accounts for 6 percent of the country's population, or about 17 million people. In 2000–2001, these states totaled 593 school districts and 5,215 schools with 2.8 million public school students.

These four states have over 3 million people between the ages of 5 years and 17 years. Mississippi has one of the highest proportions of school-age children in the nation, with more than one in five between the ages of 5 years and 17 years. With such a high proportion of young people, it is not surprising that Mississippi's expenditures per student are the third lowest in the nation, just above \$5,000. The U.S. average in 1999–2000 was \$6,911. Of the four states in the East South Central division, none exceeded \$6,000 per student. Kentucky ranks the highest of the group with \$5,921.

Only 46 states and the District of Columbia reported student eligibility for free or reduced-price lunches. In most of these states, between 25 percent and 50 percent of the students qualified. Alabama, Kentucky, and Mississippi were among the reporting states and all exceeded 45 percent in 2000–2001. Nearly two-thirds of public school students in Mississippi were eligible for free or reduced-price lunch, highest among the states, exceeded only by the District of Columbia. All four of these states top the national average for percentage of children in poverty. In both Alabama and Mississippi, 23.2 percent of the children under 18 were in poverty. Mississippi is one of seven states where the median income of a family of four was less than \$50,000 in 2000.

These four states all rank among the lowest 15 in the nation for the proportion of high school graduates in their populations. They range from a high of 80.8 percent in Kentucky to 78.9 percent in Alabama, all below the national average of 84.1 percent. Kentucky is one of five states that have increased by more than 2 percentage points since 2000. In 1998, Kentucky ranked among the five lowest in the United States, and by 2002 it had surpassed the bottom 10 states.

Only 37 states and the District of Columbia reported dropout rates for the 1999–2000 school year. Rates ranged from 2.5 percent to 9.2 percent, with the four East South Central states in the middle with rates of 5 percent or less. Kentucky has the highest dropout rate in the division with 5.0 percent, and Tennessee the lowest with 4.2 percent. When the 2000 Census is used to derive a different estimate of the population of teenage dropouts, Mississippi, Alabama, and Kentucky all have a greater than average population between the ages of 16 years and 19 years who are neither enrolled in high school nor high school graduates. For Mississippi and Alabama, these teenagers account for 12 percent or more of those

16 years to 19 years of age. Mississippi has the sixth highest proportion in the United States.

Both Tennessee and Alabama have below average student/teacher ratios, while Kentucky is among the 15 highest with 16.8 students per teacher. The number of public school students in Alabama increased by only 2.5 percent from 1990 to 2000, but during the same period the number of teachers jumped 32.9 percent to just below 50,000. Mississippi is one of eight states where student membership declined during the decade.

Nationally, about 10 percent of students are enrolled in private schools. Among the states of the East South Central division, Kentucky is near the average, and Alabama is the lowest in the division, at about 9 percent.

Kentucky and Alabama have the lowest average age of public school teachers in the nation. Tennessee is one of eight states with more than 20 percent of its teachers under 30 years of age. With so many young teachers and a cost of living that is lower than some other divisions, all four of these states have below average teacher salaries. At \$31,954, Mississippi's salaries are the third lowest in the nation, surpassing only North and South Dakota. In 1999–2000, the four states' expenditures for public elementary and secondary schools totaled more than \$15 billion, which is 4.8 percent of U.S. educational expenditures. Tennessee is one of seven states where more than 65 percent of expenditures are for instruction.

In 2002, high school graduates split mostly along regional lines between taking the SAT and the ACT. In the East South Central states, most graduates choose the ACT. Less than 15 percent of high school graduates took the SAT in Alabama, Kentucky, Mississippi, and Tennessee. Mississippi tied with North Dakota for the lowest proportion in the nation. However, all of these states had 70 percent or more of 2002 high school graduates taking the ACT, far surpassing the U.S. average of 39 percent. All four states had below average ACT scores, and, as with most states where few graduating seniors took the SAT, each state had average SAT scores over 1,100, surpassing the national average of 1,020 in 2002.

All the states of this division have below average college attainment levels. Kentucky, Tennessee, and Mississippi are among the bottom 10 states in the nation. Only Alabama exceeds 22 percent, which is still well below the U.S. average of 26.7 percent.

Over 5 percent of the nation's college students are enrolled in schools in these four states. More than 80 percent of students in the East South Central division were enrolled in public universities. Nationally, nearly one in four is enrolled in a private institution. Mississippi has less than 9 percent of its post-secondary students enrolled in private schools, among the lowest five proportions in the nation. In 1999–2000, less than 19 percent of degrees conferred by institutions of higher education in Mississippi were for professional, master's, or doctorates.

WEST SOUTH CENTRAL STATES:

Arkansas, Louisiana, Oklahoma, and Texas make up the West South Central division of the United States. These four states add up to more than 31 million people, with more than 6 million between 5 years and 17 years of age.

With growth of more than 22 percent during the 1990s, Texas surpassed New York to become the second largest state in the nation. More than 20 percent of Texas residents are of school age. Both Texas and Louisiana rank among the top 10 states in the nation for proportion of population between the ages of 5 years and 17 years. Arkansas and Oklahoma have proportions close to the national average of 18.9 percent.

More than 12 percent of the nation's public school students attend schools in the West South Central states. Texas has more than 4 million students attending public schools. Louisiana is one of seven states and the District of Columbia with a decrease in the number of public school students from 1990 to 2000. The states of the West South Central division have lower than average student-to-teacher ratios. They range from 15.1 in Oklahoma to 14.1 in Arkansas. The number of teachers in Texas grew by more than 25 percent during the 1990s, reaching 274,826 during the 2000–2001 school year.

Texas has the third highest public school expenditures in the United States, with over \$25 billion per year. The other three states in the division have expenditures ranging from \$4.4 billion to \$2.3 billion. Per student expenditures in the West South Central states are lower than average. The average in the United States is \$6,911. The amounts in this division range from \$6,288 in Texas to \$5,277 in Arkansas. Both Arkansas and Oklahoma have among the seven lowest expenditures per student in the nation. In Oklahoma, less than 58 percent of expenditures are directed toward instruction. This ranks the state among the lowest five in the United States for instruction expenditures.

There are nearly 2,000 school districts in the West South Central States, ranging from 1,040 in Texas to 78 in Louisiana. Texas has the highest number of school districts in the nation. Oklahoma has 544 school districts, but just 15 percent as many public school students as Texas. Louisiana has one of the highest proportions of private school students, while Oklahoma, Texas, and Arkansas have among the lowest proportions in the nation. Louisiana and Texas have among the highest proportions of minority students. They are among seven states in the United States where minorities make up the majority of public school students. Nationally, more than 60 percent of public school students are Non-Hispanic White.

The West South Central states have high proportions of students who qualify for free or reduced-price lunch. All four states exceed 44 percent and are among the 15 highest in the 46 states with data. In Louisiana, more than 58 percent of students are eligible. All four states have more than 20 percent of their children in poverty, ranging from 28.3 percent in Arkansas, to 21.1 percent in Texas. The U.S. average is 16.3 percent.

The median income of a family of four in this division is less than \$54,000. Arkansas has the lowest median income in the nation, with \$44,537. The U.S. average is \$62,228. The average teacher's salary in Texas is \$38,361, which is well below the national average of \$43,335. Arkansas, Oklahoma, and Louisiana are among the lowest 10 in the nation, all less than \$35,000 a year.

Only Oklahoma surpasses the U.S. average high school attainment level. Texas and Louisiana are among five states with the proportion of high school graduates lower than 80 percent. The attainment changed by only 0.2 percent from 1998 to 2002 in Louisiana, and the proportion in Texas decreased slightly during this period. Louisiana has the highest reported dropout rate in the nation, at 9.2. The other states in the division range from 5.0 in Texas to 5.7 in Arkansas. In all four states, 9.5 percent or more of teenagers between 16 years and 19 years are not enrolled in high school and have not graduated. Texas tied for fourth in the nation, with 12.5 percent.

Most high school graduates in the West South Central states opt for the ACT over the SAT. Only Texas has more students taking the SAT. Texas is one of seven states with average scores of less than 1,000. Arkansas has one of the smallest proportions of test-takers, with just 5 percent of graduates taking the SAT. More than 70 percent of high school graduates in Arkansas took the ACT. Louisiana (79 percent) and Oklahoma (69 percent) were also well above the national average of 39 percent. All four states had lower than average scores.

Arkansas is one of three states in the United States with a proportion of college graduates lower than 20 percent. The other West South Central states range from 20.4 percent in Oklahoma to 26.2 percent in Texas. The national proportion with a bachelor's degree is 26.7 percent. Oklahoma had a slight decrease in college attainment levels from 1998 to 2002. Texas had an increase of nearly 3 percentage points during this period.

Nationally, more than 23 percent of college students are enrolled in private institutions of higher education. The West South Central states average closer to 13 percent. In Louisiana, Oklahoma, and Texas more than 23 percent of degrees awarded are for professional, master's, or doctorates. In Arkansas, less than 19 percent are advanced degrees.

MOUNTAIN STATES:

The Mountain division is composed of Arizona, Colorado, Idaho, Montana, Nevada, New Mexico, Utah, and Wyoming. There are more than 18 million people residing in these eight states, which is about 6.5 percent of the U.S. population.

Utah has the highest student-to-teacher ratio in the United States. Arizona, Nevada, Idaho, and Colorado all rank among the top 10. These Mountain states and the Pacific division dominate the top ranks of the student-to-teacher ratios. Many of the states in this division have experienced tremendous population growth in the past decade. All of the Mountain states, except Colorado, have above average proportions of student-age population. Nearly 23 percent of Utah's population is between 5 years and 17 years, which is the second highest in the nation. Idaho and New Mexico rank third and fourth in the nation with more than one in five persons of student age.

There are more than 3 million public school students in this division. Wyoming has the highest per student expenditures among the eight Mountain states. It is also the only state of the division that surpasses the U.S. average of \$6,911. Utah, Arizona, and Idaho have among the lowest five per student expenditures in the nation. Utah and Arizona are the only states where less than \$5,000 is spent per student. Utah has a high proportion of student-age population, and Arizona has experienced a growth of over 37 percent in the number of its students from 1990 to 2000.

There are 1,302 school districts in the Mountain division. Montana has 447 districts, and Nevada, a state with more than twice as many students, has just 17. Fewer children attend private school in the west. The Mountain states all have among the lowest proportion of students attending private schools in the United States. Just 167,000 students attended private school in 1999–2000 in all these states combined.

New Mexico and Wyoming have among the highest proportions of students who are eligible for free or reduced-price lunch. New Mexico ranks fourth, and Wyoming sixth out of the 45 states and the District of Columbia reporting data. New Mexico and Arizona are among the states with the highest proportion of children under 18 years living in poverty. In New Mexico, one in four children live below the poverty line. In Nevada, less than 10 percent live in poverty. This is among the 10 smallest proportions of children in poverty in the United States.

Colorado is the only Mountain state with an above average median income for a family of four. The other states in this division are all below the national average of \$62,228. Montana has the second lowest with \$46,142. Nevada has the highest average teacher salary in the division, with \$40,433, which is still below the U.S. average of

\$43,335. The majority of the other Mountain states are in the lowest third of states in the nation. Montana has the fourth lowest average teacher salary in the nation, with \$33,249.

Average SAT scores range from 1,027 in Nevada to 1,122 in Utah. All eight states are above the national average of 1,020. However, the majority of graduates in the Mountain states do not take the SAT. In Nevada, 34 percent of high school graduates take the SAT, and in Utah, just 6 percent are test-takers. Most students in this division take the ACT. In Colorado, 99 percent of 2002 high school graduates took the ACT. The other states in the division range from 66 percent in Utah to 26 percent in Arizona. Only New Mexico and Colorado have below average scores. The U.S. average score is 20.8.

High school attainment levels tend to be high in the Mountain states. New Mexico is the only state in this division with below average high school attainment levels. Less than 82 percent of New Mexico's population has graduated from high school, placing the state among the lowest 15 proportions in the nation. Wyoming and Utah have among the highest proportions of high school graduates in the nation. They are among just seven states with more than 90 percent of residents holding high school diplomas. Idaho's high school attainment level improved by more than 4 percentage points from 1998 to 2002, improving the state's rank from 33rd to 23rd. While Colorado did have a high proportion of high school graduates, with 87.6 percent in 2002, this was a decline of 2 percentage points from 1998. Nevada dropped 3.3 percentage points, changing the state's rank from 8th to 31st in the nation.

Nevada, New Mexico, and Wyoming have among the highest dropout rates among the 36 states and the District of Columbia that reported data. Utah has the lowest rate of the Mountain states reporting. (Arizona, Colorado, and Idaho have no data.) Among teenagers 16 years to 19 years old, Nevada has the highest proportion in the nation who are not in high school, and have not graduated. Arizona ranks second, with 14.8 percent. Both Colorado and New Mexico exceed the U.S. average of 9.8 percent.

Colorado has one of the highest levels of college attainment in the nation. The state is among five states where college graduates account for one-third of their populations 25 years and over. Utah is the only other state in the division that exceeds the national average of 26.7 percent. Wyoming is one of three states in the United States where less than 20 percent of residents hold bachelor's degrees. Arizona's college attainment level improved by more than 4 percentage points from 1998 to 2002. This improved the state's rank by more than nine places—moving to 23rd in the nation. Utah, Montana, and Wyoming were among eight states that had a drop in college attainment level from 1998 to 2002.

PACIFIC STATES:

The Pacific states are Alaska, California, Hawaii, Oregon, and Washington. The population of the Pacific division, which includes the largest state in the nation, exceeds 45 million. These five states contain 16 percent of the nation's population, and over 8 million students. This is one of the largest divisions in the United States.

The Pacific states account for 16.7 percent of the U.S. population between 5 years and 17 years of age. Nearly 23 percent of Alaska's population is school age, giving the state the highest proportion in the United States. Hawaii has the lowest proportion of the group, with 18 percent of the state's population between 5 years and 17 years. With the exception of Hawaii, the Pacific states have had above average population growth during the 1990s. Both Washington and Oregon have grown by more than 20 percent during the decade.

The number of school districts ranges from 985 in California to one in Hawaii. States in this division have among the smallest proportion of private school students. Hawaii is the only state with an above average proportion of students attending private schools. There are nearly 13,000 public schools in these five states, more than half of which are located in California. The number of public school students has increased by more than 24 percent in California from 1990 to 2000. The other Pacific states, except Hawaii, have had growth exceeding the U.S. average of 14.6 percent. Only California has experienced above average growth in the number of teachers during this period. Oregon had the smallest increase in public school teachers, with 7.3 percent, which is well below the national average of 23.1 percent.

All the Pacific states have above average student-to-teacher ratios. California has the second highest ratio in the nation with 20.6 students per teacher. Washington and Oregon also rank among the top 10. Alaska and Hawaii both have student-to-teacher ratios of 16.9, which exceed the national average of 16.0. Alaska has the highest proportion of student-age population in the country. California is among the 10 highest as well.

California has the highest public school expenditures in the nation. In 1999–2000, more than \$38 billion was spent. Hawaii, with considerably fewer students, spent about \$1.2 billion. In Alaska, 56 percent of expenditures go towards instructional costs; this is the second lowest proportion in the nation, exceeding only that of the District of Columbia. Hawaii and California both exceed the national average of 61.7 percent of expenditures directed for instruction.

Both Oregon and Alaska have above average per student expenditures. With \$8,806, Alaska has the sixth highest in the United States. California has the lowest in the Pacific division, with \$6,314 spent per student. California has the third highest average teacher salary in the nation.

Alaska also ranks among the top 10 states. Both states exceed \$48,000 per year, while nationally the average public school teacher salary is \$43,335. Hawaii has the lowest average teacher salary in the division, just above \$40,000.

Alaska is one of five states with fewer than one-fourth of public school students qualifying for free or reduced-price lunch. California and Hawaii both have a high proportion of students who are eligible, each above 40 percent. There is no data for Washington. The proportion of children living in poverty ranges from 16.4 percent in California to 12.5 percent in Alaska. The U.S. average is 16.3 percent. All the Pacific states have above average median income for a family of four, except for Oregon. Alaska has the highest in the division with \$66,874.

About half of the high school graduates in each of the Pacific states take the SAT. Washington has the highest average score in the division, with 1,054, and Hawaii the lowest with 1,008. The U.S. average is 1,020. The proportions that take the ACT range from 31 percent in Alaska to 12 percent in Oregon. Oregon is tied with Maine for the highest average score in the nation. All the states in this division exceed the national average score of 20.8.

Alaska is tied with Minnesota for the highest level of high school attainment in the United States. More than 92 percent of Alaska's population holds a high school diploma. Washington ranks fifth in the nation, with 90.4 percent of the state's residents having graduated from high school. California is the only state in the division with below average high school attainment levels. Nearly one in five people in California have not graduated from high school. Hawaii's high school attainment level improved by more than 3 percentage points from 1998 to 2002, moving the state from 24th in the nation to 15th. Washington is one of nine states and the District of Columbia with a drop in high school attainment level during this period.

Alaska is the only state in the Pacific division with a below average college attainment level. In Alaska, 25.6 percent of residents hold a bachelor's degree, compared with 26.7 percent nationally. Washington is the highest in the division, with 28.3 percent. Oregon is one of eight states with a decline in college attainment levels from 1998.

Among the Pacific division, Hawaii is the only state with an above average proportion of college students attending private institutions. Nationally, 23.5 percent of students are enrolled in private colleges. Alaska has the second lowest proportion in the nation, with just 4.7 percent of students in private colleges. California, with 16.1 percent, has the highest proportion in the division, after Hawaii.

Table C-1. Population, School, and Student Characteristics, by State

Fips code	State	Population, 2000		Median income of a family of four in 2000	Children under 18 years in poverty, 2001 (percent)	Poverty and health insurance, 1999–2001 average		
		Total persons	5 to 17 years (percent)			Total children under 19 years (1,000s)	Low-income children under 19 years (percent)	Low-income children with no health insurance (percent)
		1	2	3	4	5	6	7
00	United States	281 421 906	18.9	\$62 228	16.3	75 809	38.1	7.9

NOTES AND DEFINITIONS: STATE EDUCATION STATISTICS

This section provides details about each item's source and relevant definitions. Where available, Internet references are provided. In some cases, the Internet reference will not lead to the precise data included in this volume, but to the general category. Often additional data sources were used, such as the Census Bureau's on-line FERRET (Federal Electronic Research and Review Extraction Tool), or CD-ROM databases from the National Center for Education Statistics (NCES).

POPULATION (ITEMS 1–2)

Source: U.S. Bureau of the Census, Population Estimates Program.

The population data for 2000 are U.S. Bureau of the Census counts for the resident population as of April 1, 2000.

Internet:

<<http://www.census.gov/main/www/cen2000.html>>

INCOME, POVERTY, AND HEALTH INSURANCE (ITEMS 3–7)

Source: U.S. Bureau of the Census, Current Population Survey, March 1999, 2000, 2001

The data on income are derived from the responses of a national sample of persons 15 years and older in about 50,000 households. Total money income is defined by the Bureau of the Census for statistical purposes as the sum of the following: wage or salary income; non-farm self-employment income; Social Security and railroad retirement income; public assistance income; and all other regularly received income such as interest, dividends, veterans' payments, pensions, unemployment compensation, and alimony. Receipts not counted as income include various "lump sum" payments such as capital gains or inheritances. The total represents the amount of income received before deductions for personal income taxes, Social Security, bond purchases, union dues, Medicare deductions, etc.

Family income includes the income of all family members 15 years and older. Median family income is usually higher than median household income because many households consist of only one person. The median divides the income distribution into two equal parts, one having incomes above the median, the other with incomes below.

Poverty status is based on the definition prescribed by the U.S. Office of Management and Budget as the standard to be used by federal agencies for statistical purposes. Families are classified as below the poverty level (or "in poverty") if their total family income was less than the poverty threshold specified for the applicable family size, age of householder, and number of related children under 18 years present in the family. The poverty threshold for a 4-person family with two children under 18 years was \$17,960 in 2001. Children were defined as low-income if their family's income was less than 200% of the poverty threshold.

Persons lacking health insurance coverage include those who were covered neither by private health plans nor by Medicaid, Medicare, or a military health plan.

EDUCATIONAL ATTAINMENT (ITEMS 8–10)

Source: U.S. Bureau of the Census, Current Population Survey, March 2002

The data on educational attainment are derived from the responses of a national sample of persons in about 50,000 households. Statistics for educational attainment include only persons 25 years or older. Respondents were asked for the highest grade of school they had attended or the highest degree they had received. Persons who passed a high school equivalency examination were considered high school graduates. Schooling received in foreign schools was to be reported as the equivalent grade or years in the regular American school system.

SCHOOL DISTRICTS (ITEM 11)

Source: U.S. Department of Education, National Center for Education Statistics, Common Core of Data, 2000–2001.

A School District or Local Education Agency (LEA) is an education agency at the local level that exists primarily to operate public schools or to contract for public school services. A public school is controlled and operated by publicly elected or appointed officials and derives its primary support from public funds.

The state numbers are from the CCD state universe and include 14,514 regular school districts with students in membership. Not included are special districts, which typically offer research, administrative, or other support services to client agencies.

Internet:

<<http://nces.ed.gov/ccd/>>

NUMBER OF SCHOOLS AND STUDENTS (ITEMS 12–24)

Source: U.S. Department of Education, National Center for Education Statistics, Common Core of Data, 2000–2001.

The state data are from the CCD state universe as published in NCES' *Overview of Public Elementary and Secondary Schools and Districts: School Year 2000–2001*. There are 90,640 schools represented, including all those that reported membership in 2000–2001.

Regular schools do not focus primarily on special, vocational, or alternative education, although they may offer these programs in addition to the regular curriculum. A special education school focuses primarily on special education, with materials and instructional approaches adapted to meet the students' needs. A vocational education school focuses primarily on vocational, technical, or career education and provides education or training in at least one semiskilled or technical occupation. An alternative education school addresses the needs of students that typically cannot be met in the regular school setting, and provides nontraditional education.

Primary schools are those with a low grade of pre-kindergarten through grade 3 and a high grade of up to 8. Middle schools are those with a low grade of 4 through 7 and a high grade ranging from 4 to 9. High schools have a low grade of 7 to 12 and must extend through grade 12. All other grade configurations, including schools that are completely ungraded, are included only in the totals, but not in the percent distributions.

STUDENTS WHO ARE ELIGIBLE FOR FREE OR REDUCED-PRICE LUNCH (ITEM 25)

Source: U.S. Department of Education, National Center for Education Statistics, Common Core of Data, 2000–2001.

The Free and Reduced-Price Lunch Program is a program under the National School Lunch Act that provides cash subsidies for free or reduced-price lunches to students based on family size and income criteria. Because

participation in the Free and Reduced-Price Lunch Program depends on income, eligibility is often used to estimate student needs.

The state counts of students eligible for free or reduced-price lunches are from the NCES *Overview of Public Elementary and Secondary Schools and Districts: School Year 2000–2001*. A state is considered to have missing data if free-lunch-eligibility is reported by less than 70 percent of the schools in the state. Because five states had missing data on eligibility, NCES does not calculate a national total.

STUDENTS WITH INDIVIDUAL EDUCATION PROGRAMS (ITEM 26)

Source: U.S. Department of Education, National Center for Education Statistics, Common Core of Data, 2000–2001.

An Individualized Education Program (IEP) is a written instructional plan for students with disabilities designated as special education students under IDEA (Individuals with Disabilities Education Act). This includes a statement of present levels of educational performance of a child; a statement of annual goals, including short-term instructional objectives; a statement of specific educational services to be provided and the extent to which the child will be able to participate in regular educational programs; a projected date for initiation and anticipated duration of services; appropriate objectives, criteria and evaluation procedures; and schedules for determining, on at least an annual basis, whether instructional objectives are being achieved.

IEP counts for the states are from the NCES *Overview of Public Elementary and Secondary Schools and Districts: School Year 2000–2001*.

RACE AND HISPANIC ORIGIN (ITEMS 27–31)

Source: U.S. Department of Education, National Center for Education Statistics, Common Core of Data, 2000–2001.

The race/ethnicity categories used in the CCD are those approved, at the time these data were collected, by the federal Office of Management and Budget. They are mutually exclusive. The state data are aggregated from the CCD school universe file, as published in, *Public School Student, Staff, and Graduate Counts by State: School Year: 2000–2001*.

Internet:

<<http://nces.ed.gov/ccd/>>

DROPOUTS (ITEM 32)

Source: U.S. Department of Education, National Center for Education Statistics, Common Core of Data, 1999–2000.

A dropout is a student who was enrolled in school at some time during the previous school year; was not enrolled at the beginning of the current school year; has not graduated from high school or completed a state or district-approved educational program; and does not meet any of the following exclusionary conditions: has transferred to another public school district, private school, or state- or district-approved educational program; is temporarily absent due to suspension or school-approved illness; or has died.

The state data are from the CCD agency universe as published in the NCES report *Public High School Dropouts and Completers from the Common Core of Data: School Years 1998–1999 and 1999–2000*. Most of the states that reported on dropouts used an October through September cycle but the following states reported on students who dropped out between July and the following June: Alabama, Alaska, Illinois, Maryland, New Jersey, Oklahoma, South Dakota, Tennessee, Vermont, and Virginia. Oregon dropout counts erroneously included students that were completers, these students account for approximately 0.2 percent of Oregon's dropout counts.

Internet:

<<http://nces.ed.gov/ccd/>>

MEMBERSHIP AND GRADUATES (ITEMS 33–35)

Source: U.S. Department of Education, National Center for Education Statistics, Common Core of Data, 2000–2001.

The data are from the CCD state universe as published in *Public School Student, Staff, and Graduate Counts by State, 2000–2001*. The number of graduates includes individuals who received a regular diploma, individuals who received a diploma from other than the regular school program, and individuals who received a certificate of attendance or other certificate of completion in lieu of a diploma during the previous school year and subsequent summer school. Recipients of high school equivalency certificates are not included.

Internet:

<<http://nces.ed.gov/ccd/>>

HIGH SCHOOL COMPLETION RATES (ITEM 36)

Source: U.S. Bureau of the Census, Current Population Survey, October 1998, 1999, 2000

The data on high school completion are derived from the responses of a national sample of persons in about 50,000 households. The high school completion rate, as published in the NCES report *Dropout Rates in the United States: 2000*, represents the proportion of the population 18 years through 24 years who have completed a high school diploma or an equivalent credential, including a General Educational Development (GED) credential.

The educational attainment and high school completion status data from the October CPS supplement were used to measure high school completion rates. The completion rate is for the young adult population in the years beyond high school—that is, the population 18 years through 24 years. These rates are reported at the state level, using a 3-year average to yield more stable estimates for completion rates. State completion rates reflect the experiences of the population 18 years through 24 years living in the state at the time of the interview; thus, movements in and out of states to accommodate employment and postsecondary education may be evident in some states. For example, a state with a relatively large unskilled labor employment sector might have a lower high school completion rate than anticipated due to an influx of young workers. Conversely, a state with a disproportionate number of colleges and universities might have a higher high school completion rate than anticipated due to an influx of postsecondary students.

Internet:

<<http://nces.ed.gov/ccd/>>

PRIVATE SCHOOLS (ITEMS 37–39)

Source: U.S. Department of Education, National Center for Education Statistics, Private School Universe Survey, 1999–2000.

Private schools, enrollment and graduate estimates are published by NCES in *Private School Universe Survey, 1999–2000*. The Private School Survey (PSS) is designed to collect data from all private schools in the 50 states and the District of Columbia. The survey was conducted in 1999–2000 by the U. S. Bureau of the Census for NCES. The counts presented are estimates derived from an area frame as well as a census of lists. Although the Private School Survey has begun to collect limited data on the many private schools for which kindergarten is the highest grade, the data in this volume are for schools (traditional schools) which include at least one grade between 1 and 12.

A private school is controlled by an individual or agency other than a state, a subdivision of a state, or the federal government; is usually supported primarily by other than public funds; and the operation of its program rests with other than publicly elected or appointed officials. Private institutions include both nonprofit and proprietary institutions.

Internet:

<<http://nces.ed.gov/surveys/pss/>>

STUDENT/TEACHER RATIOS (ITEMS 40–47)

Source: U.S. Department of Education, National Center for Education Statistics, Common Core of Data, 2000–2001 for public schools; Private School Universe Survey, 1999–2000 for private schools.

The public school numbers are from the CCD state universe, as published in *Public School Student, Staff, and Graduate Counts by State, 2000–2001*. Teacher counts measure the full-time equivalent teachers, including teachers who are employed by agencies and not assigned to specific schools. The student/teacher ratio is calculated by dividing the number of students in all schools by the number of full-time equivalent teachers employed by all schools and agencies.

The private school numbers are from the PSS, as published in *Private School Universe Survey, 1999–2000*. These estimates measure full-time equivalent teachers. The student/teacher ratio is calculated by dividing the number of students enrolled in all schools by the number of Full-Time Equivalent teachers employed by all schools.

TEACHER SALARIES (ITEM 48)

Source: National Education Association, Rankings & Estimates database, as shown in *Rankings & Estimates Update, Fall 2002*. Copyright 2002, NEA, Washington, D.C. All rights reserved. Reprinted with permission.

The National Education Association publishes average teacher salaries by state in its annual *Estimates of School Statistics*. The information is compiled from surveys conducted at the state departments of education. In the fall/winter of each year, NEA Research submits current-year estimates of more than 35 educational statistics to each state's department of education for verification or revision. The figures submitted by NEA Research result from regression analysis, a statistical technique designed to make projections using data from prior years. Only if

an education department does not replace these projections with its own estimated data does the NEA use regression-generated figures in its report. In the numbers used in this volume, the following states' estimates were based on the regression analysis: Alabama, Arizona, Michigan, Nevada, New Jersey, and Rhode Island.

The average salary is for public school teachers and is defined as the arithmetic mean of the salaries of the group described. This figure is the average gross salary before deductions for Social Security, retirement, health insurance, etc.

Internet:

<<http://www.nea.org/publiced/edstats/salaries.html>>

PUBLIC SCHOOL STAFF (ITEMS 49–67)

Source: U.S. Department of Education, National Center for Education Statistics, Common Core of Data, 2000–2001.

The public school staff data are from the CCD state universe, as published in *Public School Student, Staff, and Graduate Counts by State: School Year 2000–2001*. The number of teachers represents full-time equivalent teachers employed within the state. Instructional Aides directly assisted teachers in providing instruction. Instructional Coordinators helped teachers through curriculum development and in-service training. Support staff includes food, health, library, maintenance, transportation, security, and other services in public schools. School administrators are principals and assistant principals. School District Administrators include the Local Education Agency superintendents, deputies, assistant superintendents, and other persons with district-wide responsibilities.

<<http://nces.ed.gov/ccd/>>

CHARACTERISTICS OF TEACHERS (ITEMS 68–74)

Source: U.S. Department of Education, National Center for Education Statistics, Schools and Staffing Survey (SASS), 1993–1994 and 1999–2000.

The highest degree earned is from the 1993–1994 Schools and Staffing Survey, as published in the *Digest of Education Statistics, 2001*. Age distribution and average age of public school teachers is from the 1999–2000 Schools and Staffing survey.

The Schools and Staffing Survey is a set of linked questionnaires that covers public school districts, public and private schools, principals, and teachers as its core components. The SASS data are collected through a sample survey of schools, the school districts associated with

sample schools, school principals, and teachers. The 1993–1994 SASS estimates are based on a sample of approximately 12,500 schools (9,500 public and 3,000 private); 63,000 teachers (53,000 public and 10,000 private); and 5,363 public school districts. This volume includes only the characteristics of public school teachers. The 1999–2000 SASS estimates are based on a sample of approximately 13,500 schools (9,900 public and 3,600 private); 67,000 teachers (56,000 public and 11,000 private); and 5,500 public school districts.

NATIONAL ASSESSMENT OF EDUCATIONAL PROGRESS (ITEMS 75–79)

Source: U.S. Department of Education, National Center for Education Statistics, National Assessment of Educational Progress, 1998 and 2000.

The National Assessment of Educational Progress (NAEP) is a congressionally mandated project of the National Center for Education Statistics (NCES) that has, for more than a quarter of a century, continually collected and reported information on what American students know and can do. It is the nation's only ongoing, comparable, and representative assessment of student achievement. Its assessments are based on a national probability sample of public and nonpublic school students enrolled in grades 4, 8, or 12. Results are provided only for group performance. NAEP is forbidden by law to report results at an individual or school level. The assessment questions are written around a framework prepared for each content area—reading, writing, mathematics, science and others—that represents the consensus of groups of curriculum experts, educators, and members of the general public on what should be covered in such a test.

In response to legislation passed by Congress in 1988, the NAEP program includes voluntary state-by-state assessments. To help ensure valid state-by-state results, NCES applies minimum school and student participation rate standards for its reporting activities. Results are not reported for jurisdictions that failed to meet these standards.

This volume includes the proportion of students in specific grades whose NAEP mathematics, science, and writing assessment results were designated to be “proficient” or better for their grades. The achievement level results describe what students participating in the NAEP assessment should know and be able to do. The National Assessment Governing Board (NAGB) adopted three achievement levels: Basic, Proficient, and Advanced. The Basic level denotes partial mastery of fundamental

knowledge and skills. The Proficient level defines solid academic performance that demonstrates competency in challenging subject matter, and the Advanced level signifies superior performance. The achievement levels are based on collective judgments, gathered from a broadly representative panel of teachers, education specialists, and members of the general public, about what students should know and be able to do relative to a body of content reflected in the NAEP assessment framework.

SCHOLASTIC ASSESSMENT TEST SCORES (ITEMS 80–82)

Source: *SAT Averages by State for 1990 and 1997–2000*, copyright 2002 by the College Entrance Exam Board. Reprinted with permission. All rights reserved. <www.collegeboard.com>. Number of high school graduates as projected by the Western Interstate Commission for Higher Education, *Knocking at the College Door: Projections of High School Graduates by State and Race/Ethnicity, 1996–2012*, copyright 1998 by the Western Interstate Commission for Higher Education. All rights reserved.

The Scholastic Assessment Test (SAT) is an examination administered by the Educational Testing Service and used to predict the facility with which an individual will progress in learning college-level academic subjects.

The Profile of College-Bound Seniors presents data for 2002 high school graduates who participated in the SAT Program during their high school years. Students are counted once no matter how often they tested, and only their latest scores are summarized.

The College Entrance Examination Board cautions that relationships between test scores and other factors such as educational background, gender, racial/ethnic background, parental education, and household income are complex and interdependent. These factors do not directly affect test performance; rather, they are associated with educational experiences both on tests such as the SAT I and in school work. Moreover, not all students in a high school, school district, or state take the SAT I. Since the population of test-takers is self-selected, using aggregate SAT I scores to compare or evaluate teachers, schools, districts, states, or other educational units is not valid, and the College Board strongly discourages such uses.

Interpreting SAT I scores for states requires unique considerations. The most significant factor to consider in interpreting SAT I scores for any group, or subgroup, of test-takers is the proportion of students taking the test.

For example, it is important to recognize that in some states there are lower participation rates. Typically, test takers in these low participation states have strong academic backgrounds and apply to the nation's most selective colleges and scholarship programs. For these states, it is expected that the SAT I mean scores reported for students will be higher than the national average.

<http://www.collegeboard.com/prod_downloads/about/news_info/cbsenior/yr2002/pdf/table3.pdf>

ACT ASSESSMENT AVERAGE COMPOSITE SCORES (ITEMS 83 AND 84)

Source: 2002 ACT Composite Averages by State, copyright 2002 by ACT, Inc. Totals for graduating seniors were obtained from Projections of High School Graduates by State and Race/Ethnicity 1996–2012, Copyright by Western Interstate Commission for Higher Education, February 1998.

Founded in 1959 as the American College Testing Program, ACT, Inc. is an independent, not-for-profit organization that provides more than 100 assessment, research, information, and program management services in the broad areas of educational planning, career planning, and workforce development. The ACT Assessment is designed to assess high school students' general educational development and their ability to complete college-level work. The tests cover four skill areas: English, mathematics, reading, and science reasoning. These data are based on all high school graduates of the class of 2002 who took the ACT Assessment during their sophomore, junior or senior year. For students who took the test more than once, only the most recent scores are used. Those students who tested on campus, used extended time testing or failed to list a valid high school code are not included.

College-bound students who take the ACT Assessment are not representative of college-bound students nationally. First, students who live in the Midwest, the Mountain West, the Plains, and the South are overrepresented among ACT-tested students as compared to college-bound students nationally. Second, ACT-tested students tend to enroll in public college and universities more frequently than do college-bound students nationally.

Caution should be used in comparing state and national norms. State norms may differ from national norms for non-educational reasons such as the representativeness of the ACT-tested population and the demographic makeup of a state.

Internet:

<<http://www.act.org/news/data/02/states.html>>

PRELIMINARY SAT (PSAT)/NATIONAL MERIT SCHOLARSHIP QUALIFYING TEST (NMSQT) (ITEMS 85–88)

Source: PSAT scores as published by the College Entrance Examination Board, *PSAT/NMSQT*® 2002 *State Summary Reports*, copyright 2003 by collegeboard.com. Reproduced with permission. All rights reserved.

The PSAT/NMSQT (Preliminary SAT/National Merit Scholarship Qualifying Test) is a program co-sponsored by the College Board and National Merit Scholarship Corporation. The test serves several functions, including: help assess skills necessary for college-level work, prepare for the SAT, enter the competition for national scholarships (including the National Merit Scholarship Corporation scholarship programs), and receive educational and financial aid information from colleges, universities, and scholarship programs.

Verbal, math, and writing skills scores are each reported on a 20–80 scale. The average scores of juniors are between 47 and 49. Unless students earn scores that are much lower than average, they're probably developing the kinds of critical reading, math problem-solving, and writing skills needed for academic success in college.

The total of the verbal, math, and writing skills scores is the Selection Index used by National Merit scholarship Corporation to designate groups to be honored in its scholarship programs. The qualifying score varies from state to state, depending on the proportion of test-takers in each state. Scores between 65 and 80 on each skill mark the approximate level of the top students who may qualify. In states with higher percentages of scores in this range, a student must achieve a higher Selection Index to be designated as a semifinalist.

Internet:

<www.collegeboard.com/research/html/2002_psat.html>

REVENUES (ITEMS 89–93)

Source: U.S. Department of Education, National Center for Education Statistics, Common Core of Data, Fiscal Year 2000.

The data are from the National Public Education Financial Survey data file for fiscal year 2000 (school year 1999–2000). The state data include adjustments

made by NCES. Values that were missing and not reported elsewhere in the survey were imputed based on proportions in reporting states. Other adjustments were made when a single value was reported that included two or more categories. NCES distributed portions of the single reported value to the missing items.

Revenues from federal sources include direct grants-in-aid from the federal government; federal grants-in-aid through the state or an intermediate agency; and other revenue in lieu of taxes to compensate a school district for nontaxable federal institutions within a district's boundaries.

Revenues from state government sources include those that can be used without restriction; those for categorical purposes; and revenues in lieu of taxation. Included are revenues from payments made by a state for the benefit of the Local Education Agency (LEA) or contributions of equipment or supplies. Such revenues include the payment of a pension fund by the state on behalf of an LEA employee for services rendered to the LEA and contributions of fixed assets (property, plant, and equipment) such as school buses and textbooks.

Revenues from local sources include local property and non-property tax revenues; taxes levied or assessed by an LEA; revenues from a local government to the LEA; tuition received; transportation fees; earnings on investments from LEA holdings; net revenues from food services (gross receipts less gross expenditures); net revenues from student activities (gross receipts less gross expenditures); and other revenues (textbook sales, donations, property rentals).

Intermediate revenues come from sources that are not local or state education agencies, but operate at an intermediate level between local and state education agencies and possess independent fund-raising capability.

Internet:
<<http://nces.ed.gov/ccd/>>

EXPENDITURES (ITEMS 94–98)

Source: U.S. Department of Education, National Center for Education Statistics, Common Core of Data, Fiscal Year 2000.

The data are from the National Public Education Financial Survey data file for fiscal year 2000 (school year 1999–2000). The state data include adjustments made by NCES. Values that were missing and not reported elsewhere in the survey were imputed based on proportions in reporting states. Other adjustments were made when a single value was reported that included two

or more categories. NCES distributed portions of the single reported value to the missing items.

Current expenditures are defined as expenditures for the categories of instruction, support services, and non-instructional services for salaries, employee benefits, purchased services and supplies; and payments by the state made for or on behalf of school systems. This does not include expenditures for debt service and capital outlay, and property (i.e., equipment); or direct costs (e.g., Head Start, adult education, community colleges, etc.) and community services expenditures.

Instructional expenses are current expenditures for activities dealing directly with the interaction between students and teachers. These include teacher salaries and benefits, supplies such as textbooks, and purchased instructional services.

Support services expenditures are current expenditures for activities which support instruction. These services include operation and maintenance of buildings, school administration, student support services (e. g., nurses, therapists, and guidance counselors), student transportation, instructional staff support (i.e., librarians, instructional specialists), school district administration, business services, research, and data processing.

Noninstructional expenditures are mostly for food service with some expenditures for enterprise operations such as bookstores and interscholastic athletics.

Current expenditures per student were derived by dividing total current expenditures by the fall 1999 student membership count from the CCD. Student membership is the count of students enrolled on or about October 1 and is comparable across all states.

Internet:
<<http://nces.ed.gov/ccd/>>

HIGHER EDUCATION (ITEMS 99–109)

Source: U.S. Department of Education, National Center for Education Statistics, Integrated Postsecondary Education Data System (IPEDS), “Fall Enrollment 2000” for enrollment data, and “Completions” for degrees conferred.

The Integrated Postsecondary Education Data System (IPEDS) surveys approximately 10,000 postsecondary institutions, including universities and colleges, as well as institutions offering technical and vocational education beyond the high school level. This survey, which began in 1986, replaced the Higher Education General Information Survey (HEGIS). IPEDS consists of eight

integrated components that obtain information on who provides postsecondary education (institutions), who participates in it and completes it (students), what programs are offered and what programs are completed, and both the human and financial resources involved in the provision of institutionally based postsecondary education. Specifically, these components include: Institutional Characteristics, including instructional activity; Fall Enrollment, including age and residence; Enrollment in Occupationally Specific Programs; Completions; Finance; Staff; Salaries of Full-Time Instructional Faculty; and Academic Libraries.

Institutions of Higher Education include those institutions that have courses leading to an associate degree or higher, or are accepted for credit toward those degrees. A public institution is controlled and operated by publicly elected or appointed officials and derives its primary support from public funds. A private institution is controlled by an individual or agency other than a state, a subdivision of a state, or the federal government; is usually supported primarily by other than public funds; and the operation of its program rests with other than publicly elected or appointed officials. Private institutions include both nonprofit and proprietary institutions.

Undergraduate students are those registered at an institution of higher education who are working in a program leading to a baccalaureate degree or other formal award below the baccalaureate, such as an associate degree.

An associate degree is a degree granted for the successful completion of a sub-baccalaureate program of studies, usually requiring at least 2 years (or equivalent) of full-time, college-level study. This includes degrees granted in a cooperative or work-study program.

A bachelor's degree is a degree granted for the successful completion of a baccalaureate program of studies, usually requiring at least 4 years (or equivalent) of full-time college-level study. This includes degrees granted in a cooperative or work-study program.

First-professional enrollment is the number of students enrolled in a professional school or program which requires at least 2 years of academic college work for entrance and a total of at least 6 academic years for a degree, including both prior-required college work and the professional program itself. By the NCES definition, first-professional enrollment includes only students in certain programs leading to a degree that signifies both completion of the academic requirements for beginning practice in a given profession and a level of professional skill beyond that normally required for a bachelor's

degree. First-professional degrees are awarded in the fields of dentistry (D. D. S. or D. M. D.), medicine (M. D.), optometry (O. D.), osteopathic medicine (D. O.), pharmacy (D. Phar.), podiatric medicine (D. P. M.), veterinary medicine (D. V. M.), chiropractic (D. C. or D. C. M.), law (J. D.), and theological professions (M. Div. or M. H. L.).

Graduate enrollment is the number of students who hold the bachelor's or first-professional degree, or the equivalent, and who are working towards a master's or doctor's degree. First-professional students are counted separately. These enrollment data measure those students who are registered at a particular time during the fall. At some institutions, graduate enrollment also includes students who are in postbaccalaureate classes but not in degree programs.

A master's degree is a degree awarded for successful completion of a program generally requiring 1 or 2 years of full-time, college-level study beyond the bachelor's degree. One type of master's degree, including the Master of Arts degree, or M. A., and the Master of Science degree, or M. S., is awarded in the liberal arts and sciences for advanced scholarship in a subject field or discipline and demonstrated ability to perform scholarly research. A second type of master's degree is awarded for the completion of a professionally oriented program, for example, an M. Ed. in education, an M. B. A. in business administration, an M. F. A. in fine arts, an M. M. in music, an M. S. W. in social work, and an M. P. A. in public administration. A third type of master's degree is awarded in professional fields for study beyond the first-professional degree, for example, the Master of Laws (LL. M.) and Master of Science in various medical specializations.

A Doctor's Degree is an earned degree carrying the title of doctor. The Doctor of Philosophy degree (Ph. D.) is the highest academic degree and requires mastery within a field of knowledge and demonstrated ability to perform scholarly research. Other doctorates are awarded for fulfilling specialized requirements in professional fields, such as education (Ed. D.), musical arts (D. M. A.), business administration (D. B. A.), and engineering (D. Eng. or D. E. S.). Many doctor's degrees in academic and professional fields require an earned master's degree as a prerequisite. First-professional degrees, such as M. D. and D. D. S., are not included under this heading.

Internet:
<<http://nces.ed.gov/ipeds/>>

EDUCATIONAL ATTAINMENT (ITEMS 110–112)

Source: U.S. Bureau of the Census, 2000 Census of Population and Housing.

Data on educational attainment were derived from answers to long-form questionnaire Item 9, which was asked of a sample of the population. Data on attainment are tabulated for the population 25 years old and over. People are classified according to the highest degree or level of school completed. The order in which degrees were listed on the questionnaire suggested that doctorate degrees were “higher” than professional school degrees, which were “higher” than master’s degrees. The question included instructions for people currently enrolled in school to report the level of the previous grade attended or the highest degree received. Respondents who did not report educational attainment or enrollment level were assigned the attainment of a person of the same age, race, Hispanic or Latino origin, occupation and sex, where possible, who resided in the same or a nearby area. Respondents who filled more than one box were edited to the highest level or degree reported. The question included a response category that allowed respondents to report completing the 12th grade without receiving a high school diploma. It allowed people who received either a high school diploma or the equivalent, for example, passed the Test of General Educational Development (G.E.D.) and did not attend college, to be reported as “high school graduate(s).”

High school graduate or higher. This category includes people whose highest degree was a high school diploma or its equivalent, people who attended college but did not receive a degree, and people who received a college, university, or professional degree. People who reported completing the 12th grade but not receiving a diploma are not high school graduates.

Bachelor’s degree or higher. This category includes people whose highest degree was a bachelor’s, master’s, professional, or doctorate degree. Master’s degrees include the traditional MA and MS degrees and field-specific degrees, such as MSW, MEd, MBA, MLS, and MEng. Some examples of professional degrees include medicine, dentistry, chiropractic, optometry, osteopathic medicine, pharmacy, podiatry, veterinary medicine, law, and theology. Vocational and technical training, such as barber school training; business, trade, technical, and vocational schools; or other training for a specific trade, are specifically excluded.

SCHOOL ENROLLMENT AND TYPE OF SCHOOL (ITEMS 113–118)

Source: U.S. Bureau of the Census, 2000 Census of Population and Housing.

Data on school enrollment were derived from answers to long-form questionnaire Items 8a and 8b, which were asked of a sample of the population. People were classified as enrolled in school if they reported attending a “regular” public or private school or college at any time between February 1, 2000, and the time of enumeration. The question included instructions to “include only nursery school or preschool, kindergarten, elementary school, and schooling which leads to a high school diploma or a college degree” as regular school or college. Respondents who did not answer the enrollment question were assigned the enrollment status and type of school of a person with the same age, sex, and race/Hispanic or Latino origin whose residence was in the same or a nearby area. All persons 3 years and over are included. College students are counted at their dormitories or college-area residences, not at their family homes.

Public and private school. Public and private school includes people who attended school in the reference period and indicated they were enrolled by marking one of the questionnaire categories for either “public school, public college” or “private school, private college.” Schools supported and controlled primarily by a federal, state, or local government are defined as public (including tribal schools). Those supported and controlled primarily by religious organizations or other private groups are private.

DROPOUTS (ITEMS 119 AND 120)

Source: U.S. Bureau of the Census, 2000 Census of Population and Housing.

Not enrolled, not high school graduate. This category includes people of compulsory school attendance age or above who were not enrolled in school and were not high school graduates. These people may be referred to as “high school dropouts.” However, there is no criterion regarding when they “dropped out” of school, so they may have never attended high school. This table includes only persons 16 years to 19 years of age.

PART D—EDUCATION STATISTICS BY COUNTY

- Expenditures per student range from more than \$24,000 in remote North Slope, Alaska to \$2,637 in Sierra, California. The median per student expenditure was \$5,932 (with half of the counties spending more and half spending less). Los Angeles County had the largest student enrollment as well as the most educational expenditures, with more than \$9 billion spent in fiscal 1999. Loving County, Texas had the fewest students, with just 27 children enrolled in kindergarten through 12th grade.
- In the United States, there are approximately 3,100 counties (including county equivalents), more than 15,000 “Local Education Agencies” (school districts), about 90,000 public schools, and more than 45 million public school students. Some counties—even large counties such as Miami-Dade County, Florida—have only one school district, while others have many—for example, Maricopa County, Arizona has 166, and Cook County, Illinois has 154 school districts.
- Student/teacher ratios vary greatly from county to county, ranging from a handful of counties exceeding 25 students per teacher, to a low of 5.4 students per teacher in King County, Texas, a county with only 86 students. The median student/teacher ratio is 14.8. More than 800 counties had student/teacher ratios between 14 and 16.
- There are 31 counties, nearly all in the South and almost half of these in Mississippi, where 90 percent or more of the students are eligible for free or reduced-price lunches. In another 31 counties, less than 10 percent of the students are poor enough to qualify for these federal programs. More than 60 percent of all counties with data fall between 20 and 50 percent eligible.
- Colorado has eight of the top 20 counties with the highest proportions of high school graduates, including Douglas County, Colorado, where 97 percent of residents over 25 years have a high school diploma. Just 11 counties have high school attainment levels less than 50 percent. Eight of these counties are located in Texas. Twelve counties have college attainment levels exceeding 50 percent. Half of these counties are located in the Washington, DC suburbs. Just two counties have less than 5 percent of adults with a bachelor’s degree, one in Alaska and the other in Kentucky.

Table D-1. Population, School, and Student Characteristics by County

County	State/County code	County type ¹	Population, 2000		Number of school districts, 2000–2001	Level of schools, 2000–2001			
			Total persons	Percent 5–17 years		Number of schools	Percent

NOTES AND DEFINITIONS: COUNTY EDUCATION STATISTICS

Section D presents 38 data items for each county, county equivalent, or independent city. The counties are presented in alphabetical order within states, which are also in alphabetical order. Independent cities, which are found in Maryland, Missouri, Nevada, and Virginia, are placed in alphabetical order at the end of the list of counties for those states. The District of Columbia is included as both a county and a state.

Common Core of Data. Items 3 through 27 in this section are from the Common Core of Data (CCD) from the National Center for Education Statistics (NCES), U.S. Department of Education. NCES uses the CCD system to acquire and maintain statistical data from each of the 50 states, the District of Columbia, and the outlying areas. Information about staff and students is collected annually at the school, local education agency (LEA) or school district, and state levels. Information about revenues and expenditures is also collected at the state level. In addition, information about revenues and expenditures at the school district level is assembled from the annual surveys of government finances conducted by the Bureau of the Census.

Data are collected for a particular school year (July 1 through June 30) via survey instruments sent to the state education agencies during the subsequent school year. States have one year in which to modify the data originally submitted. This volume uses the data from the school year 2000–2001, except for the revenue and expenditure data for counties, which is for school year 1998–1999 (fiscal year 1999).

Since the CCD is a universe survey, the CCD information is not subject to sampling error. However, nonsampling errors could come from two sources—nonreturn and inaccurate reporting. Almost all of the states submit the six CCD survey instruments each year, but submissions are sometimes incomplete or too late for publication.

Understandably, when 51 education agencies compile and submit data for approximately 90,000 public schools and 15,000 local school districts, misreporting can occur. Typically, this results from varying interpretation of NCES definitions and differing record keeping systems. NCES attempts to minimize these errors by working closely with the Council of Chief State School Officers (CCSSO) and its Committee on Evaluation and Information Systems (CEIS).

The state education agencies report data to NCES from data collected and edited in their regular reporting cycles. NCES encourages the agencies to incorporate into their

own survey systems the NCES items they do not already collect so that those items will also be available for the subsequent CCD survey. Over time, this has meant fewer missing data cells in each state's response, reducing the need to impute data.

NCES subjects data from the education agencies to a comprehensive edit. Where data are determined to be inconsistent, missing, or out of range, NCES contacts the education agencies for verification. NCES-prepared state summary forms are returned to the state education agencies for verification. States are also given an opportunity to revise their state-level aggregates from the previous survey cycle. The county-level data in this volume have not been adjusted.

The CCD data are collected at three levels—the school, the school district, and the state. In Section D, selected school and school district data items have been aggregated to the county level because the county is a widely used statistical area. School districts, and even some schools, can serve populations in different counties. In this volume, schools and school districts are assigned to the county where the school district office is located, as coded by NCES in their files. Consequently, the numbers do not necessarily represent the population of a given county. The structure of school districts ranges from states like West Virginia and Nevada, where most counties have a single school district, to Maricopa County, AZ, which includes 166 separate school districts. Some counties have no school districts. Hawaii has a single statewide school district whose offices are located in Honolulu County. New York City has a single school system for all five boroughs (counties). A few other counties report no school districts, usually counties with very small populations or independent cities in Virginia whose school systems are run by the neighboring or surrounding county.

In recent years, charter schools have become common in many states. In some states, these are considered separate special school districts. They are included in this volume if they reported students in membership. For example, the number of school districts in Maricopa County, AZ increased from 132 to 166 in two years, primarily because of the addition of individual charter schools. The District of Columbia also now includes 33 additional school districts in the database, but only one in this volume because the 33 charter schools did not report any students or any other information.

For additional information about the Common Core of Data, see <www.nces.ed.gov/ccd/>.

2000 Census of Population and Housing. Items 1, 2, and 28 through 38 are from the 2000 Census. The population totals

and age data are from the complete count, while the education data are from the long-form questionnaire that was answered by a sample of the population. The sample data are estimates of the actual figures that would have been obtained from a complete count. Estimates derived from a sample are expected to be different from the 100-percent figures because they are subject to sampling and nonsampling errors. Sampling error in data arises from the selection of people and housing units included in the sample. Nonsampling error affects both sample and 100-percent data and is introduced as a result of errors that may occur during the data collection and processing phases of the census.

For additional information about the 2000 Census, see: <http://www.census.gov/main/www/cen2000.html>.

Geographic identification. Data are presented for 3,141 counties and county equivalents. A five-digit state and county code is given for each entity. The first two digits indicate the state; the remaining three identify the county. Within each state, the counties are numbered in alphabetical order, beginning with 001, with even numbers usually omitted. Independent cities follow the counties and begin with the number 510.

These codes have been established by the U.S. government as Federal Information Processing Standards and are often referred to as “FIPS codes.” They are used by U.S. government agencies and many other organizations for data presentation. They are provided in this volume for use in matching the data given here with other data sources in which counties may be identified by FIPS code.

Independent cities. Independent cities are not included in any county; data are presented separately in this volume where available.

County type. Table D provides, in the third column, a “county type” code which identifies each county by its metropolitan/nonmetropolitan status and its size. These codes were developed by the Economic Research Service of the U.S. Department of Agriculture and are commonly referred to as “Beale” codes after their originator, Calvin Beale. The ERS county typology scheme goes beyond the Beale codes to a detailed typology of economic and land use classifications. In this volume, the basic Beale codes are used and are as follows:

Metropolitan counties

- (0) Central county of a metropolitan area of 1 million population or more.
- (1) Fringe county of a metropolitan area of 1 million population or more.
- (2) County in a metropolitan area of 250,000 to 1,000,000 population.
- (3) County in a metropolitan area of less than 250,000 population.

Nonmetropolitan counties

- (4) Urban population of 20,000 or more, adjacent to a metropolitan area.
- (5) Urban population of 20,000 or more, not adjacent to a metropolitan area.
- (6) Urban population of 2,500–19,999, adjacent to a metropolitan area.
- (7) Urban population of 2,500–19,999, not adjacent to a metropolitan area.
- (8) Completely rural (no places with a population of 2,500 or more), adjacent to a metropolitan area.
- (9) Completely rural (no places with a population of 2,500 or more), not adjacent to a metropolitan area.

Data sources and explanations. Table D has been developed by Bernan from the individual school and school district data from the CCD. Some data items in Table C, such as revenues and expenditures, include statewide numbers that are inappropriate at the local level, so the two tables are not necessarily consistent.

TABLE D (COUNTIES)**POPULATION (ITEMS 1–2)**

Source: U.S. Bureau of the Census

The population data for 2000 are from the 2000 Census and represent the resident population as of April 1, 2000.

Age is defined as age at last birthday (i.e. number of completed years from birth to April 1, 2000).

SCHOOL DISTRICTS (ITEM 3)

Source: U.S. Department of Education, National Center for Education Statistics, Common Core of Data, 2000–2001.

A School District or Local Education Agency (LEA) is an education agency at the local level that exists primarily to operate public schools or to contract for public school services.

The county totals in this volume include 15,507 regular and special school districts. Special districts typically offer research, administrative, or other support services to client agencies. Excluded are all regular and special districts that reported no students in membership.

NUMBER OF SCHOOLS AND STUDENTS (ITEMS 4–11)

Source: U.S. Department of Education, National Center for Education Statistics, Common Core of Data, 2000–2001.

The county data were aggregated from 90,640 individual schools in the CCD school universe. Primary schools are those with a low grade of prekindergarten through grade 3 and a high grade of up to 8. Middle schools are those with a low grade above grade 3 and a high grade ranging from 4 to 9. High schools have a low grade of 7 to 12 and must extend through grade 12. All other grade configurations, including schools that are completely ungraded, are included only in the totals.

STUDENTS WITH INDIVIDUAL EDUCATION PROGRAMS (ITEM 12)

Source: U.S. Department of Education, National Center for Education Statistics, Common Core of Data, 2000–2001.

An Individualized Education Program (IEP) is a written instructional plan for students with disabilities designated as special education students under the Individuals with Disabilities Education Act (IDEA). This includes a statement of present levels of educational performance of a child; a statement of annual goals, including short-term instructional objectives; a statement of specific educational services to be provided and the extent to which the child will be able to participate in regular educational programs; a projected date for initiation and anticipated duration of services; appropriate objectives, criteria and evaluation procedures; and schedules for determining, on at least an annual basis, whether instructional objectives are being achieved.

IEP counts for the counties are from the agency universe. Some agencies did not report this information. If 20 percent or more of a county's student membership were represented by agencies with missing data, the county was considered "missing." Students with IEPs were counted as a percentage of students in agencies who reported this information, not as a percentage of all students in the county.

STUDENTS WHO ARE ELIGIBLE FOR FREE OR REDUCED-PRICE LUNCH (ITEM 13)

Source: U.S. Department of Education, National Center for Education Statistics, Common Core of Data, 2000–2001.

The Free or Reduced-Price Lunch Program is a program under the National School Lunch Act that provides cash subsidies for free lunches to students based on family size and income criteria. Because participation in the Free Lunch Program depends on income, eligibility is often used to estimate student needs.

The number of students who apply for and are eligible to receive free or reduced-price lunches is included in the

CCD school universe, from which the county totals in this volume were derived. If 20 percent or more of a county's student membership were in schools with missing data, the county was considered "missing." Eligible students were counted as a percentage of students in schools who reported this information, not as a percentage of all students in the county.

MINORITY STUDENTS (ITEM 14)

Source: U.S. Department of Education, National Center for Education Statistics, Common Core of Data, 2000–2001.

The percentage of a county's students who were minority was tallied from the CCD school universe. Individual schools reported the number of students who were American Indian/Alaskan Native, Asian/Pacific Islander, Hispanic, Black non-Hispanic, and White non-Hispanic. "Minority" includes all categories except White non-Hispanic.

TEACHERS (ITEMS 15–16)

Source: U.S. Department of Education, National Center for Education Statistics, Common Core of Data, 2000–2001.

The number of teachers in each county is aggregated from the full-time equivalent numbers in the CCD school universe. The student/teacher ratio is calculated from this school-based number and the number of students reported by individual schools in the county.

STAFF (ITEMS 17–18)

Source: U.S. Department of Education, National Center for Education Statistics, Common Core of Data, 2000–2001.

The county data are aggregated from the CCD agency universe. Staff in local schools who are not classroom teachers include teacher aides; guidance counselors; librarians and library/media support staff; principals and their assistants and support staff; and all noninstructional staff such as health services workers, bus drivers, social workers, and all others employed in the schools. Central administration staff and support include the Local Education Agency superintendents, deputies, assistant superintendents, all persons with district-wide responsibilities, and their support staffs, as well as all staff supervising instructional programs at the district or sub-district level, such as curriculum coordinators.

GRADUATES (ITEM 19)

Source: U.S. Department of Education, National Center for Education Statistics, Common Core of Data, 2000–2001.

The county data are from the CCD agency universe. The number of graduates includes individuals who received a regular diploma, individuals who received a diploma from other than the regular school program, and individuals who received a certificate of attendance or other certificate of completion in lieu of a diploma during the previous school year and subsequent summer school. Recipients of high school equivalency certificates are not included.

DROPOUTS (ITEM 20)

Source: U.S. Department of Education, National Center for Education Statistics, Common Core of Data, 1999–2000.

The county data are from the CCD agency universe dropout file. A dropout is a student who was enrolled in school at some time during the previous school year; was not enrolled at the beginning of the current school year; has not graduated from high school or completed a state or district-approved educational program; and does not meet any of the following exclusionary conditions; has transferred to another public school district, private school, or state- or district-approved educational program; is temporarily absent due to suspension or school-approved illness; or has died.

Dropout data for a particular year are reported the following year. For example, 1999–2000 dropout data are reported in the 2000–2001 Local Education Agency Universe file. Thus, the dropout rates are based on the prior year's enrollment from the 1999–2000 school universe.

REVENUES (ITEMS 21–24)

Source: U.S. Department of Education, National Center for Education Statistics, Common Core of Data, Fiscal Year 1999.

The county data are aggregated from the 15,554 agencies in the Public School District Financial Survey data file for fiscal year 1999 (school year 1998–1999). Some of these school districts have no students in membership but they have revenues and expenditures, usually because of financial arrangements with neighboring counties or regional agencies. These revenue and expenditure data are obtained by the U.S. Bureau of the Census through its annual surveys of government finances and are supplied by the Bureau of the Census to the National Center for Education Statistics.

Revenues from federal sources include direct grants-in-aid from the federal government; federal grants-in-aid through the state or an intermediate agency; and other revenue that, in lieu of taxes, had the tax base been subject to taxation.

Revenues from state government sources, include those that can be used without restriction; those for categorical purposes; and revenues in lieu of taxation. Included are revenues from payments made by a state for the benefit of the LEA or contributions of equipment or supplies. Such revenues include the payment of a pension fund by the state on behalf of an LEA employee for services rendered to the LEA; contributions of fixed assets (property, plant, and equipment) such as school buses and textbooks.

Revenues from local sources include revenues from a local education agency, including local property and non-property tax revenues, local government, tuition, transportation, food services, student activities, textbook sales, donations, and property rentals. Revenues from local sources include taxes levied or assessed by an LEA; revenues from a local government to the LEA; tuition received; transportation fees; earnings on investments from LEA holdings; net revenues from food services (gross receipts less gross expenditures); net revenues from student activities (gross receipts less gross expenditures); and other revenues (textbook sales, donations, property rentals).

A fourth category, Intermediate Revenues, is not included in this volume but can be derived by subtracting the federal, state, and local revenues from the total revenue. Intermediate revenues come from sources that are not local or state education agencies, but operate at an intermediate level between local and state education agencies and possess independent fund-raising capability.

EXPENDITURES (ITEMS 25–27)

Source: U.S. Department of Education, National Center for Education Statistics, Common Core of Data, Fiscal Year 1999.

The county data are aggregated from the 15,554 agencies in the Public School District Financial Survey data file for fiscal year 1999 (school year 1998–1999). Some of these school districts have no students in membership but they have revenues and expenditures, usually because of financial arrangements with neighboring counties or regional agencies. These revenue and expenditure data are obtained by the U.S. Bureau of the Census through its annual surveys of government finances and are supplied by the Bureau of the Census to the National Center for Education Statistics.

Current expenditures are defined as expenditures for the categories of instruction, support services, and non-instructional services for salaries, employee benefits, purchased services and supplies; and payments by the state made for or on behalf of school systems. This does not

include expenditures for debt service and capital outlay, and property (i.e., equipment); or direct costs (for Head Start, adult education, community colleges) and community services expenditures.

Current expenditures per student for counties is calculated by dividing current expenditures by the number of students in fall membership. Student membership is the count of students enrolled on or about October 1 and is comparable across all counties. However, comparisons should be made with caution because counties vary greatly in type of school districts as well as contractual arrangements with regional administrative school agencies or neighboring counties. For example, a county with a small population may have a school district that operates an elementary school and pays an intergovernmental fee to a neighboring county's school district for educational services to children in middle and high school. This hypothetical county would have artificially high per student expenditures because only the elementary school children would be included in the membership count.

Current expenditures for instruction are expenditures for activities dealing directly with the interaction between students and teachers (salaries, including sabbatical leave, employee benefits, and purchased instructional services).

EDUCATIONAL ATTAINMENT (ITEMS 28–30)

Source: U.S. Bureau of the Census, 2000 Census of Population and Housing.

Data on educational attainment were derived from answers to long-form questionnaire Item 9, which was asked of a sample of the population. Data on attainment are tabulated for the population 25 years old and over. People are classified according to the highest degree or level of school completed. The order in which degrees were listed on the questionnaire suggested that doctorate degrees were “higher” than professional school degrees, which were “higher” than master's degrees. The question included instructions for people currently enrolled in school to report the level of the previous grade attended or the highest degree received. Respondents who did not report educational attainment or enrollment level were assigned the attainment of a person of the same age, race, Hispanic or Latino origin, occupation and sex, where possible, who resided in the same or a nearby area. Respondents who filled more than one box were edited to the highest level or degree reported. The question included a response category that allowed respondents to report completing the 12th grade without receiving a high school diploma. It allowed people who received either a high school diploma or the equivalent, for example, passed the Test of General Educational Development (G.E.D.) and did not attend college, to be reported as “high school graduate(s).”

High school graduate or higher. This category includes people whose highest degree was a high school diploma or its equivalent, people who attended college but did not receive a degree, and people who received a college, university, or professional degree. People who reported completing the 12th grade but not receiving a diploma are not high school graduates.

Bachelor's degree or higher. This category includes people whose highest degree was a bachelor's, master's, professional, or doctorate degree. Master's degrees include the traditional MA and MS degrees and field-specific degrees, such as MSW, MEd, MBA, MLS, and MEng. Some examples of professional degrees include medicine, dentistry, chiropractic, optometry, osteopathic medicine, pharmacy, podiatry, veterinary medicine, law, and theology. Vocational and technical training, such as barber school training; business, trade, technical, and vocational schools; or other training for a specific trade, are specifically excluded.

SCHOOL ENROLLMENT AND TYPE OF SCHOOL (ITEMS 31–36)

Source: U.S. Bureau of the Census, 2000 Census of Population and Housing.

Data on school enrollment were derived from answers to long-form questionnaire Items 8a and 8b, which were asked of a sample of the population. People were classified as enrolled in school if they reported attending a “regular” public or private school or college at any time between February 1, 2000, and the time of enumeration. The question included instructions to “include only

nursery school or preschool, kindergarten, elementary school, and schooling which leads to a high school diploma or a college degree” as regular school or college. Respondents who did not answer the enrollment question were assigned the enrollment status and type of school of a person with the same age, sex, and race/Hispanic or Latino origin whose residence was in the same or a nearby area. All persons 3 years and over are included.

Public and private school. Public and private school includes people who attended school in the reference period and indicated they were enrolled by marking one of the questionnaire categories for either “public school, public college” or “private school, private college.” Schools supported and controlled primarily by a federal, state, or local government are defined as public (including tribal schools). Those supported and controlled primarily by religious organizations or other private groups are private.

DROPOUTS (ITEMS 37 AND 38)

Source: U.S. Bureau of the Census, 2000 Census of Population and Housing.

Not enrolled, not high school graduate. This category includes people of compulsory school attendance age or above who were not enrolled in school and were not high school graduates. These people may be referred to as “high school dropouts.” However, there is no criterion regarding when they “dropped out” of school, so they may have never attended high school. This table includes only persons 16 years to 19 years old.
